Zionism that surrounds him. Friedlander goes on to spend his adulthood shuttling between Israel, Europe, and the United States, armed with his talent for language and an expansive intellect. His prestige inevitably throws him up against other intellectual heavyweights. In his early years in Israel, he rubs shoulders with the architects of the fledgling state and brilliant minds such as Gershom Scholem and Carlo Ginzburg, among others. Most importantly, this memoir led Friedlander to reflect on the wrenching events that induced him to devote sixteen years of his life to writing his Pulitzer Prize-winning masterpiece, *The Years of Extermination: Nazi Germany and the Jews, 1939-1945*--

| Sommario/riassunto      | This open access book covers recent advances in experiments using the ultra-cold, very weakly perturbing superfluid environment provided by helium nanodroplets for high resolution spectroscopic, structural and dynamic studies of molecules and synthetic clusters. The recent infra-red, UV-Vis studies of radicals, molecules, clusters, ions and biomolecules, as well as laser dynamical and laser orientational studies, are reviewed. The Coulomb explosion studies of the uniquely quantum structures of small helium clusters, X-ray imaging of large droplets and electron diffraction of embedded molecules are also described. Particular emphasis is given to the synthesis and detection of new species by mass spectrometry and deposition electron microscopy. |
