

1. Record Nr.	UNINA9910136125503321
Autore	Everett Daniel L.
Titolo	Dark Matter of the Mind : The Culturally Articulated Unconscious // Daniel L. Everett
Pubbl/distr/stampa	Chicago : , : University of Chicago Press, , [2016] ©2016
ISBN	0-226-40143-X
Descrizione fisica	1 online resource (395 pages)
Classificazione	CC 6600
Disciplina	154.2
Soggetti	Subconsciousness Knowledge, Theory of Context effects (Psychology) Cognition and culture Language and culture Philosophical anthropology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Previously issued in print: 2016.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Frontmatter -- Contents -- Preface -- Acknowledgments -- Introduction -- 1. The Nature and Pedigree of Dark Matter -- 2. The Ranked- Value Theory of Culture -- 3. The Ontogenesis and Construction of Dark Matter -- 4. Dark Matter as Hermeneutics -- 5. The Presupposed Dark Matter of Texts -- 6. The Dark Matter of Grammar -- 7. Gestures, Culture, and Homesigns -- 8. Dark Matter Confrontations in Translation -- 9. Beyond Instincts -- 10. Beyond Human Nature -- Conclusion -- Notes -- References -- Index
Sommario/riassunto	Is it in our nature to be altruistic, or evil, to make art, use tools, or create language? Is it in our nature to think in any particular way? For Daniel L. Everett, the answer is a resounding no: it isn't in our nature to do any of these things because human nature does not exist-at least not as we usually think of it. Flying in the face of major trends in Evolutionary Psychology and related fields, he offers a provocative and compelling argument in this book that the only thing humans are hardwired for is freedom: freedom from evolutionary instinct and freedom to adapt to a variety of environmental and cultural contexts.

Everett sketches a blank-slate picture of human cognition that focuses not on what is in the mind but, rather, what the mind is in—namely, culture. He draws on years of field research among the Amazonian people of the Pirahã in order to carefully scrutinize various theories of cognitive instinct, including Noam Chomsky's foundational concept of universal grammar, Freud's notions of unconscious forces, Adolf Bastian's psychic unity of mankind, and works on massive modularity by evolutionary psychologists such as Leda Cosmides, John Tooby, Jerry Fodor, and Steven Pinker. Illuminating unique characteristics of the Pirahã language, he demonstrates just how differently various cultures can make us think and how vital culture is to our cognitive flexibility. Outlining the ways culture and individual psychology operate symbiotically, he posits a Buddhist-like conception of the cultural self as a set of experiences united by various apperceptions, episodic memories, ranked values, knowledge structures, and social roles—and not, in any shape or form, biological instinct. The result is a fascinating portrait of the "dark matter of the mind," one that shows that our greatest evolutionary adaptation is adaptability itself.
