Sommario/riassunto

Dans les pays occidentaux, plus d'une femme sur dix sera atteinte par cette maladie. Pendant longtemps, celle-ci a été synonyme de mutilation et de peu de chance de guérison. Grâce à la généralisation du dépistage et aux nouvelles techniques diagnostiques ainsi qu'aux progrès considérables de traitements, la majorité des patientes peut actuellement bénéficier de traitements beaucoup moins agressifs tout en bénéficiant dans la grande majorité des cas d'une chance de guérison complète.
