

1. Record Nr.	UNINA9910136373603321
Titolo	ANSI/ IEEE Std 762-1980 : IEEE Trial use Standard Definitions for Use in Reporting Electric Generating Unit Reliability, Availability, and Productivity // Institute of Electrical and Electronics Engineers
Pubbl/distr/stampa	[Place of publication not identified] : , : IEEE, , 1980
ISBN	1-5044-0440-8
Descrizione fisica	1 online resource
Disciplina	001.640246213
Soggetti	Electric generator industry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>This standard is intended to aid the electric power industry in reporting and evaluating electric generating unit reliability, availability, and productivity. This standard was developed to overcome present difficulties in the interpretation of electric generating unit performance data from various systems and to facilitate comparisons among different systems. It should also make possible the future exchange of meaningful data among systems in the United States, Canada, and throughout the world.</p>
