1. Record Nr. UNINA9910136431103321

Autore	Baba Yoshihiro
Titolo	Electromagnetic computation methods for lightning surge protection studies / / authored by Yoshihiro Baba and Vladimir A. Rakov
Pubbl/distr/stampa	Hoboken : , : John Wiley & Sons Inc., , 2016 [Piscataqay, New Jersey] : , : IEEE Xplore, , [2016]
ISBN	1-118-27565-9 1-118-27564-0
Descrizione fisica	1 online resource (330 p.)
Classificazione	SCI022000
Disciplina	621.31/7
Soggetti	Transients (Electricity) - Mathematical models Lightning-arresters - Mathematical models Lightning protection - Mathematical models Electromagnetism - Mathematics Time-domain analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Machine generated contents note: Preface 1 -- Introduction 2 -- Lightning 3 -- The Finite-Difference Time-Domain Method for Solving Maxwell's Equations 4 -- Applications to Lightning Surge Protection Studies Appendix 3D-FDTD Program in C++ Index .
Sommario/riassunto	"Presents current research into electromagnetic computation theories with particular emphasis on Finite-Difference Time-Domain Method This book is the first to consolidate current research and to examine the theories of electromagnetic computation methods in relation to lightning surge protection. The authors introduce and compare existing electromagnetic computation methods such as the method of moments (MOM), the partial element equivalent circuit (PEEC), the finite element method (FEM), the transmission-line modeling (TLM) method, and the finite-difference time-domain (FDTD) method. The application of FDTD method to lightning protection studies is a topic that has matured through many practical applications in the past decade, and the authors explain the derivation of Maxwell's equations required by the FDTD,

and modeling of various electrical components needed in computing lightning electromagnetic fields and surges with the FDTD method. The book describes the application of FDTD method to current and emerging problems of lightning surge protection of continuously more complex installations, particularly in critical infrastructures of energy and information, such as overhead power lines, air-insulated sub-stations, wind turbine generator towers and telecommunication towers. Both authors are internationally recognized experts in the area of lightning study and this is the first book to present current research in lightning surge protection Examines in detail why lightning surges occur and what can be done to protect against them Includes theories of electromagnetic computation methods and many examples of their application Accompanied by a sample printed program based on the finite-difference time-domain (FDTD) method written in C++ program "--
