Sommario/riassunto	Pierre-Louis Ginguené (1748-1816) : un « littérateur » qui fut à la fois poète à la mode, musicien compétent, journaliste et animateur de presse, critique en vue, fondateur de l'histoire littéraire et comparatiste avant l'heure, mais qui fut aussi un citoyen engagé dans l'action politique, républicain avant et après la République, directeur de l' <i>Instruction publique</i> , ambassadeur à Turin sous le Directoire, membre du Tribunat avant d'en être écarté, opposant mal résigné à l'Empire. Homme-carrefour, apôtre laïc de la communication, ou homme-charnière entre un ancien régime déclinant et une « idéologie » laïque et républicaine en gestation, Ginguené est de ceux qui ont préparé l'émergence des mentalités modernes et d'une conception radicalement nouvelle de la littérature. Le présent livre, tiré des actes du colloque international Ginguené (tenu à Rennes en avril 1992), reflète la polyvalence de l' <i>Idéologue</i> aussi bien que du médiateur.

Nota di contenuto	1. Background -- 2. Aspects of building energy use -- 3. Energy audits

-- 4. Techniques for reducing energy consumption -- 5. Instrumentation and measurements -- 6. Organization and implementation -- 7. Legislation and grants -- 8. Controls and building management systems (BMS) -- Case study 1: An office building with medium-level glazing -- Case study 2: Conversion of a traditionally built dwelling to office use -- Appendix 1: Estimating energy consumption using degree days -- Appendix 2: Additional data and calculations -- Selected bibliography -- Index.

Sommario/riassunto

This new edition of *A Guide to Energy Management in Buildings* begins by asking why we need to control energy use in buildings and proceeds to discuss how the energy consumption of a building can be assessed or estimated through an energy audit. It then details a range of interventions to reduce energy use and outlines methods of assessing the cost-effectiveness of such measures. Topics covered include: where and how energy is used in buildings; energy audits; measuring and monitoring energy use; techniques for reducing energy use in buildings; legislative issues. And new in this edition: the cooling of buildings; fuel costs and smart metering; and education and professional recognition. It provides a template for instigating the energy-management process within an organization, as well as guidance on management issues such as employee motivation, and gives practical details on how to carry the process through. This book should appeal to building and facilities managers and also to students of energy management modules in FE and HE courses.
