

1. Record Nr.	UNINA9910137127903321
Titolo	2016 27th Irish Signals and Systems Conference (ISSC) // IEEE Staff
Pubbl/distr/stampa	Piscataway : , : IEEE, , 2016
ISBN	1-5090-3409-9
Descrizione fisica	1 online resource (250 pages)
Disciplina	621.392
Soggetti	Telecommunication systems Statistical communication theory
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Annotation The Conference focuses on all aspects of digital signal processing, control and communications, and encompasses algorithm, circuit and system modelling, design, and implementation We welcome theory and applications orientated papers in the following exemplar thematic areas Systems and Information Security Secure Coding Cloud Infrastructures Mobile Application Security Digital Forensics Evidence Watermarking Steganography Signal Processing Detection, estimation and prediction for signals and systems Image, multimedia, speech and audio signal processing Biomedical signal processing and systems Bio inspired systems Cryptography, and information hiding Machine learning and computational intelligence Scalable analytical techniques Control Systems Linear and non linear systems modelling and control Adaptive systems and robust control Intelligent control systems Production engineering Distributed control Systems identification Communication Systems Next generation wireless and optical.
