

1. Record Nr.	UNINA9910137198203321
Autore	Tanja Nijboer
Titolo	Novel insights in rehabilitation of neglect // topic editors, Tanja Nijboer and Stefan Van der Stigchel
Pubbl/distr/stampa	Frontiers Media SA, 2015 France : , : Frontiers Media SA, , 2014
ISBN	9782889194094
Edizione	[Second edition.]
Descrizione fisica	1 online resource (269 pages) : digital, PDF file(s)
Collana	Frontiers Research Topics
Soggetti	Occupational Therapy & Rehabilitation Health & Biological Sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Sommario/riassunto	Hemispatial neglect is the failure to report, respond to, or orient to novel or meaningful stimuli presented in the contralesional visual field when this failure cannot be attributed to motor or sensory defects. It constitutes one of the most invalidating neurological disorders that can occur after stroke; it is associated with poor behavioural outcome, partially as the inattention to contralesional stimuli interferes with rehabilitation efforts intending improving other symptoms present. It is therefore important to ameliorate neglect symptoms as adequate as possible and much of the research dedicated to neglect therefore focuses on rehabilitation techniques. Recent years have seen a rise of a wide range of rehabilitation techniques tapping into various domains underlying hemispatial neglect, like optokinetic stimulation, neck-muscle vibration, prism adaptation and new comers like transcranial magnetic stimulation and direct current stimulation. Although some of these rehabilitation techniques have proven to be beneficial, there is limited agreement on the most valuable technique or the mechanisms underlying the ameliorating effects. This research topic on rehabilitation of neglect is intended to cover past and current directions in research dedicated to a) investigating the beneficial effects of (combinations of) treatments in neglect patients (single as well as

multiple sessions), b) unravelling the underlying mechanisms of these techniques in patients and/or healthy people, and c) reporting the feasibility and efficiency of techniques in rehabilitation settings. We welcome all research articles, review papers, brief communications, and commentary on topics related to neglect rehabilitation techniques that will serve to inform current clinical interventions for neglect. We hope to include both fundamental research, applied studies but also studies that bridge the gap between fundamental and applied research.
