

1. Record Nr.	UNINA9910137214303321
Autore	Haggard Genri
Titolo	Allan Kvatermjn : Russian Language
Pubbl/distr/stampa	Glagoslav E-Publications, 2014
ISBN	1-78437-274-9
Edizione	[1st ed.]
Descrizione fisica	1 online resource (308 p.)
Lingua di pubblicazione	Russo
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di contenuto	; ; ; ; ; ; ; ; ; ; ; ; ; ; ; ; ; ; -; -; ; ; ; ; ; ; ! !; ; ; ; ;
Sommario/riassunto	.. Genri Haggard - Allan Kvatermjn.

2. Record Nr.	UNINA9910595067503321
Autore	Tropea Alessia
Titolo	Biofuels Production and Processing Technology
Pubbl/distr/stampa	Basel, 2022
Descrizione fisica	1 online resource (250 p.)
Soggetti	Biotechnology Technology: general issues
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>The negative impacts of global warming and global environmental pollution due to fossil fuels mean that the main challenge of modern society is finding alternatives to conventional fuels. In this scenario, biofuels derived from renewable biomass represent the most promising renewable energy sources. Depending on the biomass used by the fermentation technologies, it is possible to obtain first-generation biofuels produced from food crops, second-generation biofuels produced from non-food feedstock, mainly starting from renewable lignocellulosic biomasses, and third-generation biofuels, represented by algae or food waste biomass. Although biofuels appear to be the closest alternative to fossil fuels, it is necessary for them to be produced in competitive quantities and costs, requiring both improvements to production technologies and the diversification of feedstock. This Special Issue is focused on technological innovations, including the utilization of different feedstocks, with a particular focus on biethanol production from food waste; different biomass pretreatments; fermentation strategies, such as simultaneous saccharification and fermentation (SSF) or separate hydrolysis and fermentation (SHF); different applied microorganisms used as a monoculture or co-culture; and different setups for biofuel fermentation processes. The manuscripts collected represent a great opportunity for adding new knowledge to the scientific community as</p>

well as industry.
