

1. Record Nr.	UNINA9910138863803321
Autore	Garduno Barrera David
Titolo	Communicating systems with UML 2 [[electronic resource]] : modeling and analysis of network protocols // David Garduno Barrera, Michel Diaz
Pubbl/distr/stampa	London, : ISTE Hoboken, N.J., : Wiley, 2011
ISBN	1-118-60220-X 1-118-60217-X 1-118-60211-0 1-299-18774-9
Edizione	[1st edition]
Descrizione fisica	1 online resource (276 p.)
Collana	ISTE
Classificazione	TEC041000
Altri autori (Persone)	DiazMichel <1945->
Disciplina	004.6
Soggetti	Computer network protocols Telecommunication systems UML (Computer science)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Title Page; Copyright Page; Table of Contents; Preface; Chapter 1. Why Use UML to Model Network Protocols?; 1.1. Modeling network protocols; 1.1.1. The complexity of communication protocols; 1.1.2. Traditional modeling; 1.1.2.1. Basic models and formal description techniques; 1.1.2.2. Automata and state machine models; 1.1.2.3. Petri Net models; 1.1.2.4. Formal and semi-formal languages; 1.1.2.5. Towards a new modeling language; 1.1.3. Traditional validation; 1.1.4. Need for a unified language for description, validation and simulation; 1.2. UML as a common language; 1.2.1. Overview 1.2.2. The beginning 1.2.3. Brief review; 1.2.3.1. Class diagram; 1.2.3.2. Package diagram; 1.2.3.3. Object diagram; 1.2.3.4. Component diagram; 1.2.3.5. Composite structure diagram; 1.2.3.6. Deployment diagram; 1.2.3.7. Sequence diagram; 1.2.3.8. Profile diagram; 1.2.3.9. Activity diagram; 1.2.3.10. Communication diagram; 1.2.3.11. Interaction overview diagram; 1.2.3.12. Timing diagram; 1.2.3.13. Use case diagram; 1.2.3.14. State machine diagram; 1.2.4. UML for network

protocols; 1.2.5. Some general UML tools; 1.3. Chapter summary; 1.4. Bibliography; Chapter 2. Simple Transmission
2.1. Introduction
2.2. Echo; 2.2.1. Requirement specification; 2.2.2. Analysis; 2.2.2.1. Sequence diagram; 2.2.2.2. Concerned classes; 2.2.2.3. Signals list definition; 2.2.3. Architecture design; 2.2.4. Detailed design: class behavior; 2.2.4.1. Client class; 2.2.4.2. Server class; 2.2.5. Echo: validation and simulation; 2.2.5.1. Simulating the model; 2.2.5.2. Model validation; 2.3. Unidirectional: simple data sending; 2.3.1. Requirement specification; 2.3.2. Analysis; 2.3.2.1. Sequence diagram; 2.3.2.2. Signals list definition; 2.3.3. Architecture design; 2.3.4. Detailed design
2.3.4.1. First variation: protocol notation (transition oriented)
2.3.4.2. Second variation: behavior notation (state oriented); 2.3.5. Validation and simulation; 2.3.5.1. Simulating the model; 2.3.5.2. Model validation; 2.4. Full duplex: simple data sending; 2.4.1. Specification; 2.4.2. Analysis; 2.4.2.1. Sequence diagram; 2.4.2.2. Concerned classes; 2.4.3. Architecture design; 2.4.4. Validation and simulation; 2.4.4.1. Simulating the model; 2.4.4.2. Model validation; 2.4.5. Different ways of doing the same thing; 2.4.5.1. A single machine; 2.4.5.2. Interruption
2.4.5.3. Composite states with concurrent regions
2.4.5.4. Parallel threads; 2.5. Chapter summary; 2.6. Bibliography; Chapter 3. Simple Chat Application; 3.1. Introduction; 3.2. Requirements; 3.3. Analysis; 3.3.1. Sequence diagrams; 3.3.1.1. Splitting the system up; 3.3.1.2. Open session; 3.3.1.3. Timeout; 3.3.1.4. Refuse; 3.3.1.5. Accept; 3.3.1.6. Close; 3.3.1.7. Send data; 3.3.2. Concerned classes; 3.3.3. Signal list definition; 3.4. Architecture design; 3.5. Detailed design; 3.5.1. Open session; 3.5.2. Timeout; 3.5.3. Refusing the session; 3.5.4. Accepting session; 3.5.5. Closing session
3.5.6. Sending data

Sommario/riassunto

This book gives a practical approach to modeling and analyzing communication protocols using UML 2. Network protocols are always presented with a point of view focusing on partial mechanisms and starting models. This book aims at giving the basis needed for anybody to model and validate their own protocols. It follows a practical approach and gives many examples for the description and analysis of well known basic network mechanisms for protocols. The book firstly shows how to describe and validate the main protocol issues (such as synchronization problems, client-server interactions, layer
