

1. Record Nr.	UNINA9910138964603321
Autore	Schnabel W (Wolfram)
Titolo	Polymers and electromagnetic radiation : fundamentals and practical applications // Wolfram Schnabel
Pubbl/distr/stampa	Weinheim, Germany : , : Wiley-VCH, , 2014 ©2014
ISBN	3-527-67771-2 3-527-67773-9 3-527-67774-7
Descrizione fisica	1 online resource (362 p.)
Disciplina	620.19204228
Soggetti	Polymers - Effect of radiation on Electromagnetic waves Ionizing radiation Nonionizing radiation
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Polymers and Electromagnetic Radiation: Fundamentals and Practical Applications; Contents; Preface; Introduction; Part I: Non-Ionizing Radiation; 1 Sub-Terahertz Radiation Including Radiofrequency (RF) and Microwave Radiation; 1.1 Absorption; 1.1.1 General Aspects; 1.1.2 Dissipation of Energy; 1.1.2.1 Frequency Dependence; 1.1.2.2 Temperature Dependence; 1.2 Applications in Polymer Chemistry; 1.2.1 General Aspects; 1.2.2 Thermal Effects; 1.2.2.1 Polymer Synthesis; 1.2.2.2 Polymer Processing; 1.2.2.3 Modification of Polymers; 1.2.2.4 Polymer Degradation 1.2.2.5 Polymer Supports for Solid-Phase Organic Synthesis (SPOS)1.2.3 Non-Thermal Effects; 1.2.3.1 Unresolved Questions; 1.2.3.2 Plasma-Assisted Chemistry; 1.3 Applications in Polymer Physics; 1.3.1 Dielectric Spectroscopy of Polymers; 1.3.2 Microwave Probing of Electrical Conductivity in Polymers; 1.3.3 Nondestructive Microwave Testing of Polymer Materials; 1.4 Industrial Applications; References; 2 Infrared Radiation; 2.1 Absorption; 2.1.1 General Aspects; 2.1.2

Crystalline Polymers; 2.1.3 Polarized IR Radiation; 2.1.4 Far-IR Radiation; 2.2 Applications; 2.2.1 General Aspects
2.2.2 Mid-IR Analysis
2.2.2.1 Identification of Synthetic Polymers;
2.2.2.2 Proteins; 2.2.2.3 Nucleic Acids; 2.2.3 NIR Analysis of Synthetic Organic Polymers; 2.2.4 Far-IR Analysis of Polymers: Terahertz Spectroscopy; 2.2.4.1 General Aspects; 2.2.4.2 Nondestructive Testing of Plastic Articles: THz Imaging; 2.2.4.3 THz Absorption by Biopolymers; 2.2.4.4 THz Studies of Biopolymers in Liquid Water; 2.2.4.5 Generation of THz Radiation in Poled Polymers; 2.2.5 Special Applications; 2.2.5.1 Thin Polymer Films; 2.2.5.2 Orientation Measurements; 2.2.5.3 IR Microspectroscopy and IR Imaging
2.3 Polymer Characterization by Two-Dimensional IR Spectroscopy
2.4 Time-Resolved Measurements in the mid-IR Range; 2.4.1 In-Situ Monitoring of Chemical Reactions; 2.4.2 Transient Two-Dimensional IR Spectroscopy; 2.4.2.1 T-Jump Studies; 2.4.2.2 Flash Photolysis; 2.5 Time-Resolved THz Spectroscopy; 2.5.1 Photoconductivity of Conjugated Polymers; 2.5.2 Folding of Proteins; 2.6 THz Optics Made From Polymers; References; 3 Visible and Ultraviolet Light; 3.1 Absorption; 3.1.1 General Aspects; 3.1.2 The Molecular Orbital Model; 3.1.3 The Jablonski Diagram
3.1.4 Absorption in Synthetic Nonconjugated Polymers
3.1.5 Absorption in Synthetic Conjugated Polymers; 3.1.6 Absorption in Biopolymers; 3.1.7 Time-Resolved Spectroscopy; 3.2 Applications; 3.2.1 General Aspects; 3.2.2 Applications in Polymer Chemistry; 3.2.2.1 Polymer Synthesis; 3.2.2.2 Modification of Synthetic Polymers; 3.2.2.3 Modification of Biopolymers; 3.2.3 Applications in Polymer Physics; 3.2.3.1 Spectroscopy; 3.2.3.2 Light Scattering; 3.2.3.3 Raman Scattering; 3.3 Technical Developments; 3.3.1 Introductory Remarks; 3.3.2 Photocuring; 3.3.3 Photolithography; 3.3.3.1 General Aspects
3.3.3.2 248 nm Lithography

Sommario/riassunto

The first part of the book deals with the interaction of polymers with non-ionizing radiation in the frequency-range from sub-terahertz over infrared radiation to visible and ultraviolet light, while the second part covers the interaction with ionizing radiation from the extreme ultraviolet to X-ray photons. Consequently, the book provides a systematic overview of how both the non-ionizing and the ionizing radiation can be used for different polymerization approaches, spectroscopy methods and lithography techniques. The covered applications include curing of coatings and adhesives, xerography,
