

1. Record Nr.	UNINA9910139058403321
Autore	Salous Sana
Titolo	Radio propagation measurement and channel modelling // Sana Salous
Pubbl/distr/stampa	Hoboken : , : John Wiley & Sons Inc., , 2013 [Piscataqay, New Jersey] : , : IEEE Xplore, , [2013]
ISBN	1-118-50228-0 1-118-50232-9 1-299-31598-4 1-118-50231-0
Descrizione fisica	1 online resource (423 p.)
Disciplina	621.3841/1
Soggetti	Shortwave radio - Transmitters and transmission - Measurement Radio wave propagation - Measurement Wireless communication systems
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	4.12.1 Matched Filter Detector 199 -- 4.12.2 Heterodyne Detector of FMCW Signals 203 -- 4.12.3 Practical Consideration of Detection Methods of FMCW Signals 207 -- 4.13 Range Doppler Ambiguity of Chirp Signals: Advanced Waveforms 207 -- 4.13.1 Three-Cell Structure 208 -- 4.13.2 Multiple WRF Structure 210 -- 4.13.3 Target Movement 211 -- 4.13.4 Doppler Shift Estimation 211 -- 4.14 Architectures of Chirp Sounders 213 -- 4.15 Monostatic Operation of FMCW Sounder/Radar 217 -- 4.15.1 Reduction of Effective Mean Received Power 218 -- 4.15.2 Spreading of the Spectrum and Interference 219 -- 4.15.3 Blind Ranges and Range Ambiguity 220 -- 4.15.4 Selection Criteria for Switching Sequences 221 -- 4.15.5 Considerations for Edge Weighting 224 -- 4.15.6 Length of the Window 224 -- 4.15.7 Window Functions 224 -- 4.15.8 Interpolation and Quantization 225 -- 4.16 Single and Multiple Antenna Sounder Architectures 225 -- 4.16.1 Single Input Single Output (SISO) Sounders 226 -- 4.16.2 MISO, SIMO and MIMO Measurements with SISO Sounders 227 -- 4.16.3 Semi-Sequential MIMO Sounders 228 -- 4.16.4 Parallel MIMO Sounders 228

-- 4.17 Ultra-wideband (UWB) Channel Sounders 232 -- 4.18 Sounder Design 233 -- 4.18.1 Sounder for Indoor Radio Channels in the UHF Band 239 -- 4.18.2 Sounder for UHF Frequency Division Duplex Links for Outdoor Radio Channels 239 -- 4.18.3 Sounder for Multiple Frequency Links for Outdoor Radio Channels 239 -- 4.19 Performance Tests of a Channel Sounder and Calibration 239 -- 4.19.1 Ambiguity Function 241 -- 4.19.2 Linearity Test 242 -- 4.19.3 Frequency Response 243 -- 4.19.4 Calibration of Automatic Gain Control 243 -- 4.19.5 Isolation between Multiple Channels 245 -- 4.19.6 Sensitivity and Dynamic Range 246 -- 4.19.7 Effect of Interference on the Dynamic Range 249 -- 4.19.8 Stability of Frequency Sources 251 -- 4.19.9 Temperature Variations 251 -- 4.20 Overall Data Acquisition and Calibration 251 -- References 251 -- 5 Data Analysis 255 -- 5.1 Data Validation 255 -- 5.2 Spectral Analysis via the Discrete Fourier Transform 256.

5.3 DFT Analysis of the FMCW Channel Sounder Using a Heterodyne Detector 259 -- 5.3.1 Snapshot Impulse Response Analysis 260 -- 5.3.2 Frequency Response Analysis 263 -- 5.3.3 Estimation of the Delay Doppler Function 266 -- 5.4 Spectral Analysis of Network Analyzer Data via the IDFT 268 -- 5.5 DFT Analysis of CW Measurements for Estimation of the Doppler Spectrum 268 -- 5.6 Estimation of the Channel Frequency Response via the Hilbert Transform 269 -- 5.7 Parametric Modelling 269 -- 5.7.1 ARMA Modelling 271 -- 5.7.2 AR Modelling 271 -- 5.7.3 Practical Implementation of Parametric Modelling 271 -- 5.7.4 Parametric Modelling for Interference Reduction 272 -- 5.7.5 Parametric Modelling for Enhancement of Multipath Resolution 274 -- 5.8 Estimation of Power Delay Profile 276 -- 5.8.1 Noise Threshold 277 -- 5.8.2 Stationarity Test 280 -- 5.9 Small-Scale Characterization 286 -- 5.9.1 Time Domain Parameters 287 -- 5.9.2 Estimation of the Coherent Bandwidth 288 -- 5.9.3 Statistical Modelling of the Time Variations of the Channel Response 291 -- 5.10 Medium/Large-Scale Characterization 292 -- 5.10.1 CDF Representation 292 -- 5.10.2 Estimation of Path Loss 293 -- 5.10.3 Relating RMS Delay Spread to Path Loss and Distance 296 -- 5.10.4 Frequency Dependence of Channel Parameters 299 -- 5.11 Multiple Antenna Array Processing for Estimation of Direction of Arrival 301 -- 5.11.1 Theoretical Considerations for the Estimation of Direction of Arrival 303 -- 5.11.2 Spectral-Based Array Processing Techniques 308 -- 5.11.3 Parametric Methods 312 -- 5.11.4 Joint Parametric Techniques 316 -- 5.12 Practical Considerations of DOA Estimation 319 -- 5.12.1 Choice of Antenna Array 320 -- 5.12.2 Array Calibration 322 -- 5.12.3 Estimation of Direction of Arrival 326 -- 5.12.4 Estimation of Direction of the Arrival/Direction of Departure 331 -- 5.13 Estimation of MIMO Capacity 333 -- References 333 -- 6 Radio Link Performance Prediction 337 -- 6.1 Radio Link Simulators 337 -- 6.2 Narrowband Stochastic Radio Channel Simulator 338.

6.2.1 Quadrature Amplitude Modulation Simulator 339 -- 6.2.2 Filtered Noise Method 339 -- 6.2.3 Sum of Sinusoids Method (Jakes Method) 341 -- 6.2.4 Frequency Domain Method 343 -- 6.2.5 Reverberation Chambers (or Mode-Stirred Chambers) 344 -- 6.3 Wideband Stochastic Channel Simulator 346 -- 6.3.1 Time Domain Channel Simulators 346 -- 6.3.2 Frequency Domain Simulators 348 -- 6.4 Frequency Domain Implementation Using Fast Convolution 349 -- 6.5 Channel Block Realization from Measured Data 351 -- 6.6 Theoretical Prediction of System Performance in Additive White Gaussian Noise 353 -- 6.6.1 Matched Filter and Correlation Detector 354 -- 6.6.2 Bit Error Rate of the Matched Filter Detector in AWGN 356 -- 6.6.3 Bit Error Rate with

Noncoherent Detectors 357 -- 6.6.4 Comparison of BER of Coherent and Noncoherent Detectors 358 -- 6.6.5 Higher Order Modulation 358 -- 6.7 Prediction of System Performance in Fading Channels 361 -- 6.7.1 Narrowband Signals 361 -- 6.7.2 Wideband Signals 363 -- 6.8 Bit Error Rate Prediction for Wireless Standards 364 -- 6.8.1 IEEE 802.16-d Standard 365 -- 6.8.2 IEEE 802.11-a Standard 371 -- 6.8.3 Third Generation WCDMA Standard 372 -- 6.9 Enhancement of Performance Using Diversity Gain 376 -- 6.9.1 Diversity Combining Methods 377 -- 6.9.2 Diversity Gain Prediction of Rayleigh Fading Channels from Measurements in a Reverberation Chamber 382 -- References 383 -- Appendix 1 385 -- A.1 Probability Distribution Functions 385 -- A.2 The Gaussian (Normal) Distribution 385 -- A.3 The Rayleigh Distribution 387 -- A.4 The Rician Distribution 388 -- A.5 The Nakagami m-Distribution 389 -- A.6 The Weibull Distribution 390 -- A.7 The Log-Normal Distribution 390 -- A.8 The Suzuki Distribution 391 -- A.9 The Chi-Square Distribution 391 -- References 391 -- Appendix 2 393 -- Index 395.

---

## Sommario/riassunto

A practical guide to radio channel measurement techniques Whilst there are numerous books describing modern wireless communication systems that contain overviews of radio propagation and radio channel modelling, few contain detailed information on the design, implementation and calibration of radio channel measurement equipment, the planning of experiments and the in depth analysis of

measured data. This work redresses that balance. Beginning with an explanation of the fundamentals of radio wave propagation, the book progresses through a series of topics, including the measurement of radio channel characteristics, radio channel sounders, measurement strategies, data analysis techniques and radio channel modelling. Application of results for the prediction of achievable digital link performance are discussed with examples pertinent to single carrier, multi-carrier and spread spectrum radio links. It addresses specifics of communications in various different frequency bands for both long range and short range fixed and mobile radio links. Key features: . Focuses on radio channel measurements and characterization with analysis of MIMO channels. Discusses the physical and technical considerations involved in the proper assessment of radio channel characteristics for efficient radio system planning, design, and implementation. Provides in-depth information on the planning of experiments and the detailed analysis of measured data from radio propagation and channel modelling. Unique practical approach describing how to design and implement channel sounders.
