Sommario/riassunto	The chemistry of heterocycles is an important branch of organic chemistry. This is due to the fact that a large number of natural products, e. g.hormones, antibiotics, vitamins, etc. are composed of heterocyclic structures. Often, these compounds show beneficial properties and are therefore applied as pharmaceuticals to treat diseases or as insecticides, herbicides or fungicides in crop protection. This volume presents important pharmaceuticals. Each of the 20 chapters covers in a concise manner one class of heterocycles, clearly structuredas follows:* Structural formulas of mos
