

1. Record Nr.	UNINA9910139139003321
Titolo	Bioprocessing of renewable resources to commodity bioproducts // edited by Virendra S. Bisaria, Akihiko Kondo ; Ruchi Uppal, cover illustrations ; contributors Somasundar Ashok [and fifty four others]
Pubbl/distr/stampa	Hoboken, New Jersey : , : Wiley, , 2014 ©2014
ISBN	1-118-84533-1 1-118-84539-0 1-118-84545-5
Descrizione fisica	1 online resource (585 p.)
Classificazione	SCI010000SCI024000TEC009010
Disciplina	662/.88
Soggetti	Microbial biotechnology Biomass energy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Machine generated contents note: Part 1: Enabling Processing Technologies Chapter 1: Biorefineries - Concepts for Sustainability Michael Sauer, Matthias Steiger, Hans Marx, Diethard Mattanovich Abstract 1.1 Introduction 1.2 Three levels for biomass use 1.3 The sustainable removal of biomass from the field is crucial for a successful biorefinery 1.4 Making order: classification of biorefineries 1.5 Quantities of sustainably available biomass 1.6 Quantification of sustainability 1.7 Starch and sugar based biorefinery 1.8 Oilseed crops 1.9 Lignocellulosic Feedstocks 1.10 Green biorefinery 1.11 Microalgae 1.12 Future Prospects - aiming for higher value from biomass References Chapter 2: Biomass Logistics Kevin L. Kenney, J. Richard Hess, Nathan A. Stevens, William A. Smith, Ian J. Bonner, David J. Muth Abstract 2.1 Introduction 2.2 Method of Assessing Uncertainty, sensitivity and influence of feedstock logistic system parameters 2.3 Understanding Uncertainty in the Context of Feedstock Logistics 2.4 Future Prospects Financial Disclosure/Acknowledgements References Chapter 3: Pretreatment of Lignocellulosic Materials Karthik Rajendran, Mohammad J. Taherzadeh Abstract 3.1. Introduction 3.2. Complexity of

Lignocelluloses 3.3. Challenges in pretreatment of Lignocelluloses 3.4. Pretreatment Methods and Mechanisms 3.5. Economic outlook 3.6. Future prospects References Chapter 4: Enzymatic Hydrolysis of Lignocellulosic Biomass Jonathan J. Stickel, Roman Brunecky, Richard T. Elander, James D. McMillan Abstract 4.1 Introduction 4.2 Cellulase, hemicellulase, and accessory enzyme systems and their synergistic action on lignocellulosic biomass 4.3 Enzymatic hydrolysis at high concentrations of biomass solids 4.4 Mechanistic process modeling and simulation 4.5 Considerations for process integration and economic viability 4.6 Economic outlook 4.7 Future prospects Acknowledgement References Chapter 5: Production of Cellulolytic Enzymes Ranjita Biswas, Abhishek Persad, Virendra S Bisaria Abstract 5.1 Introduction 5.2 Hydrolytic enzymes for digestion of lignocelluloses 5.3 Desirable attributes of cellulase for hydrolysis of cellulose 5.4 Strategies used for enhanced enzyme production 5.5 Economic Outlook 5.6 Future Prospects References Chapter 6: Bioprocessing Technologies Gopal Chotani, Caroline Peres, Alexandra Schuler, Peyman Moslemy Abstract 6.1 Introduction 6.2 Cell Factory Platform 6.3 Fermentation Process 6.4 Recovery Process 6.5 Formulation Process 6.6 Final Product Blends 6.7 Economic Outlook & Future Prospects Acknowledgement References Part 2: Specific Commodity Bioproducts Chapter 7: Ethanol from Bacteria Hideshi Yanase Abstract 7.1 Introduction 7.2 Heteroethanologenic bacteria 7.3 Homoethanologenic bacteria 7.4 Economic outlook 7.5 Future prospects References Chapter 8: Ethanol Production from Yeasts Tomohisa Hasunuma, Ryosuke Yamada, Akihiko Kondo Abstract 8.1 Introduction 8.2 Ethanol production from starchy biomass 8.3 Ethanol production from lignocellulosic biomass 8.4 Economic Outlook 8.5 Future Prospects References Chapter 9: Fermentative Biobutanol Production: an Old Topic with Remarkable Recent Advances Yi Wang, Holger Janssen, Hans P. Blaschek Abstract 9.1. Introduction 9.2. Butanol as a fuel and chemical feedstock 9.3. History of Acetone-Butanol-Ethanol (ABE) fermentation 9.4. Physiology of clostridial ABE fermentation 9.5. ABE Fermentation processes, butanol toxicity and product recovery 9.6. Metabolic engineering and 'omics'-analyses of solventogenic clostridia 9.7. Economic Outlook 9.8. Current status and future prospects References Chapter 10: Bio-based Butanediols Production: the Contributions of Catalysis, Metabolic Engineering, and Synthetic Biology Xiao-Jun Ji, He Huang Abstract 10.1 Introduction 10.2 Bio-based 2,3-Butanediol 10.3 Bio-based 1,4-Butanediol 10.4 Economic Outlook 10.5 Future Prospects Acknowledgement References Chapter 11: 1,3-Propanediol Yaqin Sun, Chengwei Ma, Hongxin Fu, Ying Mu, Zhilong Xiu Abstract 11.1 Introduction 11.2 Bioconversion of glucose into 1,3-propanediol 11.3 Bioconversion of glycerol into 1,3-propanediol 11.4 Metabolic engineering 11.5 Down-processing of 1,3-propanediol 11.6 Integrated processes 11.7 Economic outlook 11.8 Future prospects References Chapter 12: Isobutanol Bernhard J. Eikmanns, Bastian Blombach Abstract 12.1 Introduction 12.2 The access code for the microbial production of branched-chain alcohols:2-ketoacid decarboxylase and an alcohol dehydrogenase 12.3 Metabolic engineering strategies for directed production of isobutanol 12.4 Overcoming isobutanol cytotoxicity 12.5 Process development for the production of isobutanol 12.6 Economic outlook 12.7 Future prospects Acknowledgements Abbreviations References Chapter 13: Lactic Acid Kenji Okano, Tsutomu Tanaka Abstract 13.1 History of lactic acid 13.2 Applications of lactic acid 13.3 Poly lactic acid 13.4 Conventional lactic acid production 13.5 Lactic acid production from renewable resources 13.6 Economic outlook 13.7 Future prospects Abbreviation References Chapter 14:

Microbial Production of 3-hydroxypropionic acid from Renewable Sources: A Green Approach as an Alternative to Conventional Chemistry  
Vinod Kumar, Somasundar Ashok, Sunghoon Park Abstract 14.1  
Introduction 14.2 Natural microbial production of 3-HP 14.3  
Production of 3-HP from glucose by recombinant microorganisms 14.4  
Production of 3-HP from glycerol by recombinant microorganisms 14.5  
Major challenges for microbial production of 3-HP 14.6 Economic outlook 14.7 Future Prospects Acknowledgement References Chapter 15: Fumaric Acid Biosynthesis and Accumulation Israel Goldberg, J Stefan Rokem Abstract 15.1 Introduction 15.2. Microbial Synthesis of Fumaric Acid 15.3 A Plausible Biochemical Mechanism for Fumaric Acid Biosynthesis and Accumulation in Rhizopus 15.4 Towards Engineering Rhizopus for Fumaric Acid Production 15.5 Economic Outlook 15.6 Future Perspectives References Chapter 16: Succinic Acid Boris Litsanov, Melanie Brocker, Marco Oldiges, Michael Bott Abstract 16.1 Succinate as an important platform chemical for a sustainable bio-based chemistry 16.2 Microorganisms for bio-succinate production - physiology, metabolic routes, and strain development 16.3 Neutral vs. acidic conditions for product formation 16.4 Downstream processing 16.5 Companies involved in bio-succinic acid manufacturing 16.6 Future prospects and economic outlook References Chapter 17: Glutamic Acid Takashi Hirasawa, Hiroshi Shimizu Abstract 17.1 Introduction 17.2 Glutamic acid production by *Corynebacterium glutamicum* 17.3 Glutamic acid as a building block 17.4 Economic Outlook 17.5 Future Prospects References Chapter 18: Recent Advances for Microbial Production of Xylitol Yong-Cheol Park, Sun-Ki Kim, Jin-Ho Seo Abstract 18.1 Introduction 18.2. General principles for biological production of xylitol 18.3 Microbial production of xylitol 18.4 Xylitol production by genetically engineered microorganisms 18.5 Economic outlook 18.6 Future prospects References Chapter 19: First and Second Generation Production of Bio-Adipic Acid Jozef Bernard, Johann Henri van Duuren, Christoph Wittmann Abstract 19.1 Introduction 19.2 Production of bio-adipic acid 19.3 Ecological footprint of bio-adipic acid 19.4 Economic outlook 19.5 Future prospects References Index .

## Sommario/riassunto

"It is universally agreed that the era of cheap fossil oil is going to be over soon. Offering timely solutions to our current energy crisis, *Bioprocessing of Renewable Resources to Commodity Bioproducts* addresses the latest genetic and metabolic engineering approaches towards the development of recombinant microorganisms for the production of commodity byproducts. Suitable for researchers, practitioners, students, and consultants, the text provides a unique perspective to the industry about the scientific problems and their possible solutions in making a bioprocess work for commercial production of these commodity byproducts"--

"*Bioprocessing of Renewable Resources to Commodity Bioproducts* addresses the latest genetic and metabolic engineering approaches towards the development of recombinant microorganisms for the production of commodity byproducts. Suitable for researchers, practitioners, students, and consultants, the text provides a unique perspective to the industry about the scientific problems and their possible solutions in making a bioprocess work for commercial production of these commodity byproducts"--
