

1. Record Nr.	UNINA9910139427203321
Autore	Boddy Richard <1939->
Titolo	Statistical methods in practice : for scientists and technologists / / Richard Boddy, Gordon Smith [[electronic resource]]
Pubbl/distr/stampa	Chichester, U.K., : Wiley, 2009
ISBN	1-62198-222-X 0-470-74929-6
Descrizione fisica	1 online resource (xii, 236 p.) : ill. ;
Altri autori (Persone)	SmithGordon (Gordon Laird)
Disciplina	519.5 512
Soggetti	Science - Statistical methods Technology - Statistical methods Sciences - General Algebra Physical Sciences & Mathematics Mathematics Electronic books
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Samples and populations -- 2. What is the true mean? -- 3. Exploratory data analysis -- 4. Significance testing -- 5. normal distribution -- 6. Tolerance intervals -- 7. Outliers -- 8. Significance tests for comparing two means -- 9. Significance tests for comparing paired measurements -- 10. Regression and correlation -- 11. binomial distribution -- 12. Poisson distribution -- 13. chi-squared test for contingency tables -- 14. Non-parametric statistics -- 15. Analysis of variance: Components of variability -- 16. Cusum analysis for detecting process changes -- 17. Rounding of results -- Statistical Tables.
Sommario/riassunto	"This book presents a broad range of methods which form the core of a statistical toolkit required by scientists and technologists, including descriptive statistics (e.g. mean, median, standard deviation), inference (confidence intervals), significance testing for one mean, two means, two standard deviations, distributions (Normal, Binomial, Poisson),

exploratory data analysis (box plots), nonparametric methods, regression and correlation, cusum charts for plotting data over time and detecting changesA hands-on, practical approach to statistics for those with little background in the subject Introduces a broad range of methods which form the core of a statistical toolkit required by scientists and technologists, presented from descriptive statistics to nonparametric methods Includes a supporting website, providing software to aid tutorials Based on practical courses given to scientists and technologists of all levels Combines realistic case studies and examples with a practical approach to statistical analysis"--Provided by publisher.
