

1. Record Nr.	UNINA9910139572903321
Titolo	Carbon dioxide sequestration and related technologies [[electronic resource] /] / edited by Ying (Alice) Wu, John J. Carroll and Zhimin Du
Pubbl/distr/stampa	Hoboken, N.J., : Scrivener Wiley, 2011
ISBN	1-283-29499-0 9786613294999 1-118-17553-0 1-61344-888-0 1-118-17555-7
Descrizione fisica	1 online resource (510 p.)
Collana	Advances in natural gas engineering
Altri autori (Persone)	CarrollJohn J WuYing (Alice) DuZhimin
Disciplina	665.89
Soggetti	Carbon dioxide mitigation Carbon sequestration Gas wells Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	section 1. Data and correlation -- section 2. Process engineering -- section 3. Reservoir engineering -- section 4. Enhanced Oil Recovery (EOR) -- section 5. Geology and geochemistry -- section 6. Well technology -- section 7. Corrosion.
Sommario/riassunto	Carbon dioxide sequestration is a technology that is being explored to curb the anthropogenic emission of CO ₂ into the atmosphere. Carbon dioxide has been implicated in the global climate change and reducing them is a potential solution. The injection of carbon dioxide for enhanced oil recovery (EOR) has the dual benefit of sequestering the CO ₂ and extending the life of some older fields. Sequestering CO ₂ and EOR have many shared elements that make them comparable. This volume presents some of the latest information on these processes covering physical
