

1. Record Nr.	UNINA9910140525303321
Autore	Billen Roland
Titolo	3D City models and urban information [[electronic resource]] : current issues and perspectives European COST Action TU0801 // R. Billen [and others]
Pubbl/distr/stampa	EDP SCIENCES, 2014 France ; , : EDP Sciences, , 2014
Descrizione fisica	1 online resource (115 pages) : colour illustrations, charts
Disciplina	711.42
Soggetti	Sustainable development Urban development
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Chapter 1: Introduction -- Chapter 2: State-of-the-art -- Chapter 3: Action's outputs -- Chapter 4: Human aspects and perspectives -- Chapter 5: Conclusions
Sommario/riassunto	Considering sustainable development of cities implies investigating cities in a holistic way taking into account many interrelations between various urban or environmental issues. 3D city models are increasingly used in different cities and countries for an intended wide range of applications beyond mere visualization. Could these 3D City models be used to integrate urban and environmental knowledge? How could they be improved to fulfill such role? We believe that enriching the semantics of current 3D city models, would extend their functionality and usability; therefore, they could serve as integration platforms of the knowledge related to urban and environmental issues allowing a huge and significant improvement of city sustainable management and development. But which elements need to be added to 3D city models? What are the most efficient ways to realize such improvement / enrichment? How to evaluate the usability of these improved 3D city models? These were the questions tackled by the COST Action TU0801 "Semantic enrichment of 3D city models for sustainable urban development". This book gathers various materials developed all along

the four year of the Action and the significant breakthroughs.
