

1. Record Nr.	UNINA9910140570703321
Titolo	Fronts, waves and vortices in geophysical flows // [edited by] Jan-Bert Flor
Pubbl/distr/stampa	New York, : Springer, 2010
ISBN	9786613513038 9781280011641 1280011645 9783642115875 364211587X
Edizione	[1st ed.]
Descrizione fisica	1 online resource (IX, 192 p.)
Collana	Lecture notes in physics, , 0075-8450 ; ; 805
Altri autori (Persone)	FlorJan-Bert
Disciplina	550
Soggetti	Fluid mechanics Geophysics Waves
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Dynamics of Vortices in Rotating and Stratified Fluids -- Stability of Quasi-Two-Dimensional Vortices -- Oceanic Vortices -- Lagrangian Dynamics of Fronts, Vortices and Waves: Understanding the (Semi-) geostrophic Adjustment -- Wave-Vortex Interactions.
Sommario/riassunto	Most well known structures in planetary atmospheres and the Earth's oceans are jets or fronts interacting with vortices on a wide range of scales. The transition from one state to another, such as in unbalanced or adjustment flows, involves the generation of waves as well as the interaction of coherent structures with these waves. This book presents a fluid mechanics perspective to the dynamics of fronts and vortices and their interaction with waves in geophysical flows. It provides a basic physical background for modeling coherent structures in a geophysical context, and it gives essential information on advanced topics such as spontaneous wave emission and wavemomentum transfer in geophysical flows. Based on a set of lectures by leading specialists, this text is targeted at graduate students, researchers and engineers in geophysics and environmental fluid mechanics.
