

1. Record Nr.	UNINA9910140626903321
Titolo	Jets from Young Stars IV [[electronic resource] ] : From Models to Observations and Experiments / / edited by Paulo Jorge Valente Garcia, Joao Miguel Ferreira
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg, , 2010
ISBN	1-280-38188-4 9786613559791 3-642-02289-8
Descrizione fisica	1 online resource (VIII, 252 p. 88 illus.)
Collana	Lecture Notes in Physics, , 0075-8450 ; ; 793
Disciplina	523.4
Soggetti	Earth sciences Planetology Observations, Astronomical Astronomy - Observations Astrophysics Space sciences Amorphous substances Complex fluids Earth Sciences Astronomy, Observations and Techniques Astrophysics and Astroparticles Extraterrestrial Physics, Space Sciences Soft and Granular Matter, Complex Fluids and Microfluidics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Laboratory Astrophysics and Scaling -- Laboratory Studies of Astrophysical Jets -- Output from MHD Models -- Coronal Heating -- Flows in Molecular Media -- The Ionisation and Excitation State of Stellar Outflows -- Deriving Physical Diagnostics from Observations.
Sommario/riassunto	Astronomical jets are key astrophysical phenomena observed in gamma-ray bursts, active galactic nuclei or young stars. Research on

them has largely occurred within the domains of astronomical observations, astrophysical modeling and numerical simulations, but the recent advent of high energy density facilities has added experimental control to jet studies. Front-line research on jet launching and collimation requires a highly interdisciplinary approach and an elevated level of sophistication. Bridging the gaps between pure magnetohydrodynamics, thermo-chemical evolution, high angular resolution spectro-imaging and laboratory experiments is no small matter. This volume strives to bridge those very gaps. It offers a series of lectures which, taken as whole, act as a thorough reference for the foundations of this discipline. These lectures address the following: · laboratory jets physics from laser and z-pinch plasma experiments, · the magnetohydrodynamic theory of relativistic and non-relativistic stationary jets, · heating mechanisms in magnetohydrodynamic jets, from the solar magnetic reconnection to the molecular shock heating perspectives, · atomic and molecular microphysics of jet shocked material. In addition to the lectures, the book offers, in closing, a presentation of a series of observational diagnostics, thus allowing for the recovery of basic physical quantities from jet emission lines.
