

1. Record Nr.	UNINA9910140802503321
Titolo	MIMO-OFDM wireless communications with MATLAB // Yong Soo Cho ... [et al.]
Pubbl/distr/stampa	Singapore ; ; Hoboken, NJ, : Wiley, c2010
ISBN	1-282-77329-1 9786612773297 0-470-82563-4 0-470-82562-6
Edizione	[1st ed.]
Descrizione fisica	1 online resource (457 pages)
Altri autori (Persone)	ChoYong Soo
Disciplina	621.384
Soggetti	Orthogonal frequency division multiplexing MIMO systems
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Preface -- Limits of Liability and Disclaimer of Warranty of Software -- 1 The Wireless Channel: Propagation and Fading -- 1.1 Large-Scale Fading -- 1.1.1 General Path Loss Model -- 1.1.2 Okumura/Hata Model -- 1.1.3 IEEE 802.16d Model -- 1.2 Small-Scale Fading -- 1.2.1 Parameters for Small-Scale Fading -- 1.2.2 Time-Dispersive vs. Frequency-Dispersive Fading -- 1.2.3 Statistical Characterization and Generation of Fading Channel -- 2 SISO Channel Models -- 2.1 Indoor Channel Models -- 2.1.1 General Indoor Channel Models -- 2.1.2 IEEE 802.11 Channel Model -- 2.1.3 Saleh-Valenzuela (S-V) Channel Model -- 2.1.4 UWB Channel Model -- 2.2 Outdoor Channel Models -- 2.2.1 FWGN Model -- 2.2.2 Jakes Model -- 2.2.3 Ray-Based Channel Model -- 2.2.4 Frequency-Selective Fading Channel Model -- 2.2.5 SUI Channel Model -- 3 MIMO Channel Models -- 3.1 Statistical MIMO Model -- 3.1.1 Spatial Correlation -- 3.1.2 PAS Model -- 3.2 I-METRA MIMO Channel Model -- 3.2.1 Statistical Model of Correlated MIMO Fading Channel -- 3.2.2 Generation of Correlated MIMO Channel Coefficients -- 3.2.3 I-METRA MIMO Channel Model -- 3.2.4 3GPP MIMO Channel Model -- 3.3 SCM MIMO Channel Model -- 3.3.1 SCM Link-Level Channel Parameters -- 3.3.2 SCM Link-Level Channel

Modeling -- 3.3.3 Spatial Correlation of Ray-Based Channel Model -- 4
Introduction to OFDM -- 4.1 Single-Carrier vs. Multi-Carrier
Transmission -- 4.1.1 Single-Carrier Transmission -- 4.1.2 Multi-
Carrier Transmission -- 4.1.3 Single-Carrier vs. Multi-Carrier
Transmission -- 4.2 Basic Principle of OFDM -- 4.2.1 OFDM Modulation
and Demodulation -- 4.2.2 OFDM Guard Interval -- 4.2.3 OFDM Guard
Band -- 4.2.4 BER of OFDM Scheme -- 4.2.5 Water-Filling Algorithm
for Frequency-Domain Link Adaptation -- 4.3 Coded OFDM -- 4.4
OFDMA: Multiple Access Extensions of OFDM -- 4.4.1 Resource
Allocation - Subchannel Allocation Types -- 4.4.2 Resource Allocation
- Subchannelization -- 4.5 Duplexing -- 5 Synchronization for OFDM
-- 5.1 Effect of STO -- 5.2 Effect of CFO.
5.2.1 Effect of Integer Carrier Frequency Offset (IFO) -- 5.2.2 Effect of
Fractional Carrier Frequency Offset (FFO) -- 5.3 Estimation Techniques
for STO -- 5.3.1 Time-Domain Estimation Techniques for STO -- 5.3.2
Frequency-Domain Estimation Techniques for STO -- 5.4 Estimation
Techniques for CFO -- 5.4.1 Time-Domain Estimation Techniques for
CFO -- 5.4.2 Frequency-Domain Estimation Techniques for CFO -- 5.5
Effect of Sampling Clock Offset -- 5.5.1 Effect of Phase Offset in
Sampling Clocks -- 5.5.2 Effect of Frequency Offset in Sampling Clocks
-- 5.6 Compensation for Sampling Clock Offset -- 5.7 Synchronization
in Cellular Systems -- 5.7.1 Downlink Synchronization -- 5.7.2 Uplink
Synchronization -- 6 Channel Estimation -- 6.1 Pilot Structure -- 6.1.1
Block Type -- 6.1.2 Comb Type -- 6.1.3 Lattice Type -- 6.2 Training
Symbol-Based Channel Estimation -- 6.2.1 LS Channel Estimation --
6.2.2 MMSE Channel Estimation -- 6.3 DFT-Based Channel Estimation
-- 6.4 Decision-Directed Channel Estimation -- 6.5 Advanced Channel
Estimation Techniques -- 6.5.1 Channel Estimation Using a
Superimposed Signal -- 6.5.2 Channel Estimation in Fast Time-Varying
Channels -- 6.5.3 EM Algorithm-Based Channel Estimation -- 6.5.4
Blind Channel Estimation -- 7 PAPR Reduction -- 7.1 Introduction to
PAPR -- 7.1.1 Definition of PAPR -- 7.1.2 Distribution of OFDM Signal
-- 7.1.3 PAPR and Oversampling -- 7.1.4 Clipping and SQNR -- 7.2
PAPR Reduction Techniques -- 7.2.1 Clipping and Filtering -- 7.2.2
PAPR Reduction Code -- 7.2.3 Selective Mapping -- 7.2.4 Partial
Transmit Sequence -- 7.2.5 Tone Reservation -- 7.2.6 Tone Injection
-- 7.2.7 DFT Spreading -- 8 Inter-Cell Interference Mitigation
Techniques -- 8.1 Inter-Cell Interference Coordination Technique --
8.1.1 Fractional Frequency Reuse -- 8.1.2 Soft Frequency Reuse --
8.1.3 Flexible Fractional Frequency Reuse -- 8.1.4 Dynamic Channel
Allocation -- 8.2 Inter-Cell Interference Randomization Technique --
8.2.1 Cell-Specific Scrambling -- 8.2.2 Cell-Specific Interleaving.
8.2.3 Frequency-Hopping OFDMA -- 8.2.4 Random Subcarrier
Allocation -- 8.3 Inter-Cell Interference Cancellation Technique --
8.3.1 Interference Rejection Combining Technique -- 8.3.2 IDMA
Multiuser Detection -- 9 MIMO: Channel Capacity -- 9.1 Useful Matrix
Theory -- 9.2 Deterministic MIMO Channel Capacity -- 9.2.1 Channel
Capacity when CSI is Known to the Transmitter Side -- 9.2.2 Channel
Capacity when CSI is Not Available at the Transmitter Side -- 9.2.3
Channel Capacity of SIMO and MISO Channels -- 9.3 Channel Capacity
of Random MIMO Channels -- 10 Antenna Diversity and Space-Time
Coding Techniques -- 10.1 Antenna Diversity -- 10.1.1 Receive
Diversity -- 10.1.2 Transmit Diversity -- 10.2 Space-Time Coding
(STC): Overview -- 10.2.1 System Model -- 10.2.2 Pairwise Error
Probability -- 10.2.3 Space-Time Code Design -- 10.3 Space-Time
Block Code (STBC) -- 10.3.1 Alamouti Space-Time Code -- 10.3.2
Generalization of Space-Time Block Coding -- 10.3.3 Decoding for
Space-Time Block Codes -- 10.3.4 Space-Time Trellis Code -- 11

Signal Detection for Spatially Multiplexed MIMO Systems -- 11.1 Linear Signal Detection -- 11.1.1 ZF Signal Detection -- 11.1.2 MMSE Signal Detection -- 11.2 OSIC Signal Detection -- 11.3 ML Signal Detection -- 11.4 Sphere Decoding Method -- 11.5 QRM-MLD Method -- 11.6 Lattice Reduction-Aided Detection -- 11.6.1 Lenstra-Lenstra-Lovasz (LLL) Algorithm -- 11.6.2 Application of Lattice Reduction -- 11.7 Soft Decision for MIMO Systems -- 11.7.1 Log-Likelihood-Ratio (LLR) for SISO Systems -- 11.7.2 LLR for Linear Detector-Based MIMO System -- 11.7.3 LLR for MIMO System with a Candidate Vector Set -- 11.7.4 LLR for MIMO System Using a Limited Candidate Vector Set -- Appendix 11. A Derivation of Equation (11.23) -- 12 Exploiting Channel State Information at the Transmitter Side -- 12.1 Channel Estimation on the Transmitter Side -- 12.1.1 Using Channel Reciprocity -- 12.1.2 CSI Feedback -- 12.2 Precoded OSTBC -- 12.3 Precoded Spatial-Multiplexing System -- 12.4 Antenna Selection Techniques. 12.4.1 Optimum Antenna Selection Technique -- 12.4.2 Complexity-Reduced Antenna Selection -- 12.4.3 Antenna Selection for OSTBC -- 13 Multi-User MIMO -- 13.1 Mathematical Model for Multi-User MIMO System -- 13.2 Channel Capacity of Multi-User MIMO System -- 13.2.1 Capacity of MAC -- 13.2.2 Capacity of BC -- 13.3 Transmission Methods for Broadcast Channel -- 13.3.1 Channel Inversion -- 13.3.2 Block Diagonalization -- 13.3.3 Dirty Paper Coding (DPC) -- 13.3.4 Tomlinson-Harashima Precoding -- References -- Index.

Sommario/riassunto

MIMO-OFDM is a key technology for next-generation cellular communications (3GPP-LTE, Mobile WiMAX, IMT-Advanced) as well as wireless LAN (IEEE 802.11a, IEEE 802.11n), wireless PAN (MB-OFDM), and broadcasting (DAB, DVB, DMB). In *MIMO-OFDM Wireless Communications with MATLAB*, the authors provide a comprehensive introduction to the theory and practice of wireless channel modeling, OFDM, and MIMO, using MATLAB programs to simulate the various techniques on MIMO-OFDM systems. One of the only books in the area dedicated to explaining simulation aspects. Covers implementation to help cement the key concepts. Uses materials that have been classroom-tested in numerous universities. Provides the analytic solutions and practical examples with downloadable MATLAB codes. Simulation examples based on actual industry and research projects. Presentation slides with key equations and figures for instructor use. *MIMO-OFDM Wireless Communications with MATLAB* is a key text for graduate students in wireless communications. Professionals and technicians in wireless communication fields, graduate students in signal processing, as well as senior undergraduates majoring in wireless communications will find this book a practical introduction to the MIMO-OFDM techniques. Instructor materials and MATLAB code examples available for download at www.wiley.com/go/chomimo.
