1. Record Nr.   UNINA9910140976103321

   Autore   Pouly Marc <1980->

   Titolo   Generic inference [[electronic resource]] : a unifying theory for
                    automated reasoning / / Marc Pouly, Jurg Kohlas

   Pubbl/distr/stampa   Hoboken, New Jersey, : Wiley, 2011

   ISBN   1-283-12633-8
                    9786613126337
                    1-118-01086-8
                    1-118-01087-6
                    1-118-01084-1

   Edizione   [1st edition]

   Descrizione fisica   1 online resource (486 p.)

   Classificazione TEC008000

   Altri autori (Persone)   KohlasJurg <1939->

   Disciplina   006.3015181
                    519.5/4

   Soggetti   Valuation theory
                    Algorithms
                    Algebra, Abstract
                    Electronic books.

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico   Monografia

   Note generali   Description based upon print version of record.

   Nota di bibliografia   Includes bibliographical references and index.

   Nota di contenuto   pt. 1. Logical computation -- pt. 2. Generic constructions -- pt. 3.
                    Applications.

   Sommario/riassunto   "This book provides a rigorous algebraic study of the most popular
                    inference formalisms with a special focus on their wide application
                    area, showing that all these tasks can be performed by a single generic
                    inference algorithm. Written by the leading international authority on
                    the topic, it includes an algebraic perspective (study of the valuation
                    algebra framework), an algorithmic perspective (study of the generic
                    inference schemes) and a "practical" perspective (formalisms and
                    applications). Researchers in a number of fields including artificial
                    intelligence, operational research, databases and other areas of
                    computer science; graduate students; and professional programmers of
                    inference methods will benefit from this work"--
                    "The book provides a rigorous algebraic study of the most popular
                    inference formalisms with a special focus on their wide application area

and shows that all these tasks can be performed by a single generic inference algorithm. It will include an algebraic perspective (study of the valuation algebra framework), an algorithmic perspective (study of the generic inference schemes) and a "practical" perspective (formalisms and applications)"--
