#### Sommario/riassunto

The content from these proceedings comes from a symposium honoring Larry Hench, a pioneer in the field of bioceramics. Prof. Hench has condensed his Sosman Lecture into the keynote paper of this volume. In addition, this proceedings draws together research in the different aspects of bioceramics and illustrates its unifying themes. Apatites and active bone substitute materials are well represented, with extended analyses of processing effects and variations in making these materials more functional. Included in this volume are a series of papers on interactions between ceramics and biological

| <b>Sommario/riassunto</b>      | This volume of selected articles was released in light of the new economic, social and environmental challenges Europe and the United States have been faced with following the end of the Cold War and in   |

the evolving era of globalization. National security, immigration, and the provision of health and other key social services call for a radically different outlook in terms of policy discussions. The contributors of this book focus on seven key policy issues and challenges that currently affect the United States and Europe: income distribution, the gender pay gap, crime and security, unemployment, health care, the demographic question, and environmental regulation. The purpose of this volume is to analyze how public policy within the European context is responding to the challenges posed by this new global era.
