Sommario/riassunto	Cognitive linguistics is on its way to becoming a cognitive science, but a number of problems remain. The relationship between cognitive linguistics and the core cognitive sciences (psychology and neurology) must be clarified: cognitive linguists can selectively import models and methods from these disciplines as a foundation for their linguistic theories, they can export their own models to these disciplines for empirical testing and integration, or they can transform linguistics into a core cognitive science in its own right. The latter requires a number of changes to the models and practices of cognitive linguistics: it must refocus on its linguistic heritage, adopt a more scientific outlook, gain a higher degree of methodological awareness and restrict its models to linguistic constructs and hypotheses that can be operationalized and falsified.

Sommario/riassunto	When David Gorlaeus (1591-1612) passed away at 21 years of age, he left behind two highly innovative manuscripts. Once they were published, his work had a remarkable impact on the evolution of seventeenth-century thought. However, as his identity was unknown, divergent interpretations of their meaning quickly sprang up. Seventeenth-century readers understood him as an anti-Aristotelian thinker and as a precursor of Descartes. Twentieth-century historians depicted him as an atomist, natural scientist and even as a chemist. And yet, when Gorlaeus died, he was a beginning student in theology. His thought must in fact be placed at the intersection between philosophy, the nascent natural sciences, and theology. The aim of this book is to shed light on Gorlaeus' family circumstances, his education at Franeker and Leiden, and on the virulent Arminian crisis which provided the context within which his work was written. It also

attempts to define Gorlaeus' place in the history of Dutch philosophy and to assess the influence that it exercised in the evolution of philosophy and science, and notably in early Cartesian circles. Christoph Lulthy is professor of the history of philosophy and science at Radboud University Nijmegen, the Netherlands.
