1. Record Nr. UNIORUON00408241

Autore	Garde, Paul
Titolo	La transcription des noms propres français en russe / par Paul Garde
Pubbl/distr/stampa	Paris, : Institut d'études slaves, 1974
Descrizione fisica	63 p. ; 24 cm.
Disciplina	491.7
Soggetti	Lingua francese - Nomi propri - Trascrizione in russo
Lingua di pubblicazione	Francese
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr. UNINA9910141374603321

Titolo	2012 IEEE International Symposium on Electromagnetic Compatibility
Pubbl/distr/stampa	[Place of publication not identified], : IEEE, 2012
ISBN	9781467320603 1467320609
Descrizione fisica	1 online resource : illustrations
Disciplina	621
Soggetti	Electromagnetic compatibility Shielding (Electricity)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph

3. Record Nr. UNINA9911040920303321

Autore	Dixit Anurag
Titolo	Biodegradable Metallic Materials : Design, Development and Characterization / / edited by Anurag Dixit, Anil Kumar, Dayanidhi K. Pathak
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2025
ISBN	981-9524-01-6
Edizione	[1st ed. 2025.]
Descrizione fisica	1 online resource (344 pages)
Collana	Biomedical Materials for Multi-functional Applications, , 2731-9709
Disciplina	620.11
Soggetti	Materials science Materials Chemistry Materials Science Materials Chemistry Materials Engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	1.Introduction to Biodegradable Metallic Materials in Biomedical Applications -- Composition and Design Strategies for Iron-Based Biodegradable Alloys -- Fabrication Techniques and characterization for Iron-Based Biodegradable Implants -- Clinical Translation, Regulatory Considerations, and Future Perspectives, Challenges in Iron-Based Biodegradable Materials for Biomedical Applications -- Composition and Design Strategies for Magnesium-Based Biodegradable Alloys -- Fabrication Techniques and characterization for Magnesium-Based Biodegradable Implants -- Clinical Translation, Regulatory Considerations, and Future Perspectives, Challenges in Magnesium-Based Biodegradable Materials for Biomedical Applications -- Composition and Design Strategies for Zinc-Based Biodegradable Alloys -- Fabrication Techniques and characterization for Zinc-Based Biodegradable Implants -- Clinical Translation, Regulatory Considerations, and Future Perspectives, Challenges in Zinc-Based Biodegradable Materials for Biomedical Applications -- Biodegradable Metallic Materials: Recent Advances, Futuristic Opportunities and

Challenges.

Sommario/riassunto

This book explores the use of biodegradable metals for biological applications in the developing field of Biomaterials research. Iron, Magnesium and zinc are the most common biodegradable metals that have been discussed here. With an excellent mechanical integrity, adequate biocompatibility, and intrinsic biodegradability, these metals are suitable for implants, and have led to multiple studies on the creation of new alloys for degradable biological applications. The book begins with an introductory chapters to introduce the basics of metals and has three main sections. The first section provides readers with an overview of iron-based metallic biomaterials, unveils the current state of biodegradable metal technology, and discusses its potential applications for bio-implants. The second section discusses a paradigm shift from iron to magnesium-based metallic biomaterials, from material discovery and testing to implant production. This section provides an example of biodegradable metals from idea to application. Biomaterials based on magnesium have the potential to be utilized as next-generation biodegradable metals. Since magnesium (Mg) dissolves in bodily fluids, implanted Mg may deteriorate during the healing process; provided, however, that degradation is regulated, no debris will remain once healing is completed. Therefore, there may be no need for a second surgical procedure (or procedures) to remove the implant. This section demonstrates a thorough analysis that gathers, evaluates, and critically examines the most recent research on the crucial facets of magnesium-based biomaterials. This book is expected to be a fundamental resource for research in biodegradable metallic materials, fabrication of implants, tissue engineering, and biomedical engineering. A viewpoint on the application of biodegradable metals for biomedical purposes in the tissue engineering age closes the book.
