Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Environmental impact of networking infrastructures -- A step towards energy-efficient wired networks -- A step towards green mobile networks -- Green telecommunications networks -- Cognitive radio in the service of green communication and networking -- Autonomous green networks -- Reconfigurable green terminals : a step towards sustainable electronics -- Schemes for putting base stations in sleep mode in mobile networks : presentation and evaluation -- Industrial application of green networking : a smart city. pt. 1. A step towards energy-efficient networks -- pt. 2. A step towards smart green networks and sustainable terminals -- pt. 3. Research projects on green networking conducted by industrial actors.
Sommario/riassunto	This book focuses on green networking, which is an important topic for

the scientific community composed of engineers, academics, researchers and industrialists working in the networking field. Reducing the environmental impact of the communications infrastructure has become essential with the ever increasing cost of energy and the need for reducing global CO2 emissions to protect our environment. Recent advances and future directions in green networking are presented in this book, including energy efficient networks (wired networks, wireless networks, mobile networks), adaptive network

Sommario/riassunto	Offering cultural, historical and literary readings of the responses to Italian Old Master art by early nineteenth-century writers, McCue

illuminates the important role these artworks played in shaping the themes that are central to our understanding of Romanticism. She argues that they informed the writing of Romantic period authors, enabling them to forge often surprising connections between Italian art, the imagination and the period's political, social and commercial realities.
