[et al.] -- Major congenital malformations / Dina Battino, Torbjorn Tomson -- Fetal AEDS syndromes / Usha Kini -- Postnatal cognitive development / Evan Gedelman, Kim Meador --

Management of postpartum period and lactation / Autumn Klein --
Management of epilepsy and pregnancy / Sanjeev V. Thomas, Torbjorn
Tomson, Cynthia Harden -- Perimenopause and menopause / Cynthia
Harden -- Bone health / Alison Pack.

Sommario/riassunto

Epilepsy requires careful management and monitoring through a woman's life. Epilepsy is a complex disease. The hormonal changes women experience, both day-to-day menstrual fluctuations and the longer waxes and wanings of a reproductive lifetime, make the management of epilepsy even more complicated. At some point, the well-being of a second person, a fetus, might also have to be taken into account. *Epilepsy in Women* provides a detailed guide to this challenge. The wide-ranging approach encompasses all aspects of a woman's life including: Social
