

1. Record Nr.	UNINA9910141722503321
Autore	Kadic Enes <1973->
Titolo	An introduction to bioreactor hydrodynamics and gas-liquid mass transfer // Enes Kadic, Theodore J. Heindel
Pubbl/distr/stampa	Hoboken, New Jersey : , : John Wiley & Sons, , 2014 ©2014
ISBN	1-118-86989-3 1-118-86970-2 1-118-86983-4
Descrizione fisica	1 online resource (326 p.)
Classificazione	SCI085000
Disciplina	620.1/064
Soggetti	Bioreactors Bioreactors - Fluid dynamics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Machine generated contents note: 1 INTRODUCTION 1 2 MODES OF OPERATION 3 2.1 Batch Bioreactors 3 2.2 Continuous Bioreactors 9 2.3 Summary 15 3 GAS-LIQUID MASS TRANSFER MODELS 17 4 EXPERIMENTAL MEASUREMENT TECHNIQUES 28 4.1 Measuring Bioreactor Hydrodynamic Characteristics 28 4.1.1 Flow regime measurements 29 4.1.2 Local pressure drop 30 4.1.3 Mixing or residence time 32 4.1.4 Axial diffusion coefficient 33 4.1.5 Gas-liquid interfacial area 34 4.1.6 Bubble size and velocity 35 4.1.7 Global and local liquid velocity 37 4.1.8 Gas holdup 40 4.1.8.1 Bed expansion 41 4.1.8.2 Pressure drop measurements 41 4.1.8.3 Dynamic gas disengagement (DGD) 46 4.1.8.4 Tomographic techniques 47 4.1.9 Liquid holdup 50 4.1.10 Power measurements 51 4.2 Gas-Liquid Mass Transfer 53 4.2.1 Dissolved oxygen measurement techniques 54 4.2.1.1 Chemical method 54 4.2.1.2 Volumetric method 56 4.2.1.3 Tubing method 56 4.2.1.4 Optode method 57 4.2.1.5 Electrochemical electrode method 58 4.2.1.5.1 Polarographic electrodes 59 4.2.1.5.2 Galvanic probes 61 4.2.1.5.3 Electrochemical electrode time constant 61 4.2.1.5.4 Electrochemical electrode response time ( $\tau_e$ ) 64 4.2.1.5.5 Electrochemical electrode response models 66 4.2.1.5.6

Summary of electrochemical electrode response models 72 4.2.2  
Dissolved carbon monoxide measurements 72 4.2.2.1 Bioassay  
overview 74 4.2.2.2 Needed materials 75 4.2.2.3 Liquid sample  
collection 76 4.2.2.4 Identifying the concentrated myoglobin solution  
concentration 77 4.2.2.5 Sample preparation for analysis 78 4.2.2.6  
Determining the dissolved CO concentration 79 4.2.3 Determining  
volumetric gas-liquid mass transfer coefficient,  $k_L a$  80 4.2.3.1 Gas  
balance method 81 4.2.3.2 Dynamic method 82 4.2.3.2.1 Biological

## Sommario/riassunto

"This book reviews and compares the major types of bioreactors used to produce renewable fuels, chemicals, medicines, and proteins, by providing an overview of the hydrodynamics and gas-liquid mass transfer operations in this equipment. These operations are important because they influence the quality and quantity of the desired material produced in the reactor. The text also discusses advantages and disadvantages of each bioreactor and provides a procedure for optimal

bioreactor selection based on current process needs, giving chemical and mechanical engineers a practical, working reference"--

"This book provides an overview of hydrodynamics and gas-liquid mass transfer operations for various bioreactor configurations. It provides a summary of the available information for various bioreactors, reviews the relevant theories and experimental procedures, and provide a procedure for bioreactor selection"--
