Sommario/riassunto	This International Standard provides a set of tools with which to implement a Futurebus+ achitecture This high-performance bus-based system architecture provides a wide range of performance and cost scalability over time for multiple generations of single- and multiple-bus multiprocessor systems. This document, a companion standard to ISO/IEC 10875 : 1994 [ANSI/IEEE Std 896.1, 1994 Edition], builds on the logical layer by adding requirements for three military profiles. It is to these profiles that products will claim conformance.
