Autore	Albini Angelo
Titolo	Photochemically-generated intermediates in synthesis [[electronic resource] /] / Angelo Albini, Maurizio Fagnoni
Pubbl/distr/stampa	Hoboken, N.J., : Wiley, c2013
ISBN	1-118-68930-5 1-118-68920-8 1-118-68914-3
Descrizione fisica	1 online resource (382 p.)
Altri autori (Persone)	FagnoniMaurizio
Disciplina	547/.1372
Soggetti	Carbocations Carbanions Intermediates (Chemistry) Photochemistry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Photogenerated intermediates : principles and practice -- Photogeneration of carbon centered radicals -- Photogeneration of heteroatom-centered radicals -- Photogeneration of biradicals and radical pairs -- Photochemical generation of radical ions -- Photogeneration of carbocations and carbanions -- Photogeneration of carbenes and nitrenes -- Manipulating intermediates the photochemical way.
Sommario/riassunto	Examines the latest applications of photochemistry to generate important intermediates Presenting the latest breakthroughs in the field of organic photochemistry, this book offers tested and proven photochemical approaches to synthesis, creating promising new possibilities and applications for photochemical reactions. It focuses on photoreactions involving an intermediate where mechanistic aspects control the course of the reaction and its synthetic value. Readers will discover new insights into the mechanisms and nature of photo-produced reactive intermediates for organic synt

Sommario/riassunto	"In the history of revolution, there are few figures more widely known than Karl Marx, who began the "working-class" revolution with his poignant criticism of capitalist economic systems. With the help of his

close friend and colleague, writer Friedrich Engels, Marx's free-thinking spirit was inspired, and his writings were expanded. This friendship began one of the most significant social revolutions in modern history. Four of the most influential revolutions were led by pairs: V. I. Lenin and L. D. Trotsky (Russia); Mohandas K. Gandhi and Jawaharlal Nehru (India); Mao Zedong and Zhou Enlai (China); and Fidel Castro and Ernesto "Che" Guevara (Cuba). Marx and Engels, while the godfathers of three of those revolutions, participated in only one revolution, but did not, in their respective lifetimes, witness the success they had worked so hard to inspire. The members of each pair were completely dissimilar, save for their devotion to the cause. In *Revolutionary Pairs*, author Larry Ceplair tells the stories of five revolutionary struggles through the lens of these famous figures, examining their political relationships and personal histories to explain what led to the phenomenon of their radical companionships. While previous works on revolutionaries attempt to perform a psychoanalytic study of the pairs or individuals' behaviors, Ceplair takes a more practical approach, choosing instead to focus on the natural order of events and elements of personal history that the pairs shared. Some of these pairings were politically convenient, such as Lenin's contentious partnership with Trotsky during the Bolshevik revolution. Many were born of other factors, such as the mentorship between Gandhi and Nehru, or were simply a combination of respect and fear, which was the case for Zhou Enlai and Mao Zedong during the communist revolution in China. Ceplair's comparative exploration of these relationships sheds light on the complex nature of modern revolutionary history."--
