Sommario/riassunto

Chronic inflammation predisposes to some forms of cancer and the host response to malignant disease shows several parallels with inflammation and wound healing. The cells involved in inflammation are detected in a range of common cancers, together with the inflammatory cytokines and members of the chemokine ligand/receptor systems. Neutralization or deletion of the gene for some inflammatory cytokines confers resistance to tumour induction and experimental metastasis. Over-expression of such cytokines in tumour cells may enhance malignant potential. Certain chemokines are likely to subv

Sommario/riassunto	This volume unravels the politics surrounding behind China's hegemonic project of heritage tourism development in Lijiang. It provides a compelling study of the dialectical relationships between

global and domestic capital, the state, tourists and locals as they collude, collaborate and contest one another to ready Lijiang for tourist consumption. Using rich material from insightful interviews and quantitative data, the authors show how complex tourism development can be even as it strives to do good for the community. Su and Teo investigate the practices of contestation and negoti
