Sommario/riassunto

The Oxford Handbook of Psychiatric Ethics (the OHPE) examines ethical issues in twenty-first-century psychiatry and sets them in their social and political context. Key contextual developments for contemporary psychiatry include the rapid expansion of electronic communications, multiculturalism, new models of service delivery and new technologies, more oversight within stronger standards-based regulatory frameworks, and the emergence of more clinically embedded forms of practical ethics. These developments are reflected in the wide range and diversity of contributions to the OHPE.

Sommario/riassunto

Fifty-sixth Report of the Joint FAO/WHO Committee on Food Additives.
This report presents the conclusions of a Joint FAO/WHO Expert
Committee convened to assess the risks associated with the
consumption of food contaminated with specific mycotoxins. The first
part of the report contains a general discussion of the principles for
evaluating mycotoxins in food, including those concerning analytical
methods, sampling, data on food consumption and dietary intake, and
prevention and control. The second part provides a summary of the
Committee's evaluations of toxicological data on specific mycotoxins,
including aflatoxin M₁, fumonisins B₁, B₂ and B₃, ochratoxin A,
deoxynivalenol, and T-2 and HT-2 toxins.
