Controversy and Conflict over the Social Position of Nurses -- Conclusion: The Politics of Mental Health Nursing -- Appendix -- Notes -- List of Illustrations -- List of Abbreviations -- List of Archives -- Bibliography -- Index
Sommario/riassunto	Geertje Boschma's complex study examines issues from the rise of scientific psychiatry and the emergence of mental health nursing to the social relationships of class, gender, and religion that structured asylum care in the Netherlands around 1900. Drawing on the archival collections of four Dutch asylums, Boschma highlights the gendered nature of mental health nursing politics, and captures the contradictory realities of hospital-oriented asylum care, both illustrating the social complexity of the care of the mentally ill and offering an important addition to the history of European psychiatry.
