

1.	Record Nr.	UNINA9910143859603321
	Titolo	Asia-Pacific journal of operational research
	Pubbl/distr/stampa	Singapore, : Operational Research Society of Singapore, 1984-
	ISSN	1793-7019
	Descrizione fisica	v. : ill. ; ; 25 cm
	Disciplina	658.4/034/05
	Soggetti	Management - Simulation methods Operations research
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Periodico
	Note generali	Title from cover. Refereed/Peer-reviewed
2.	Record Nr.	UNISA996466638303316
	Autore	Baddeley Adrian
	Titolo	Stochastic geometry : lectures given at the C. I. M. E. summer school held in Martina Franca, Italy, September 13-18 2004 // A. Baddeley [and four others]
	Pubbl/distr/stampa	Berlin ; ; Heidelberg : , : Springer, , [2007] ©2007
	ISBN	1-280-70033-5 9786610700332 3-540-38175-9
	Edizione	[1st ed. 2007.]
	Descrizione fisica	1 online resource (XII, 292 p. 36 illus.)
	Collana	Lecture Notes in Mathematics ; ; Volume 1892
	Altri autori (Persone)	BaddeleyAdrian WeilWolfgang <1945->
	Disciplina	512.2
	Soggetti	Discrete groups Global differential geometry Distribution
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa

Livello bibliografico	Monografia
Note generali	Based on lectures given at the C.I.M.E. Summer School, held in Martina Franca, Italy, September 13-18, 2004.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Spatial Point Processes and their Applications -- Random Polytopes, Convex Bodies, and Approximation -- Integral Geometric Tools for Stochastic Geometry -- Random Sets (in Particular Boolean Models) -- Random Mosaics -- On the Evolution Equations of Mean Geometric Densities for a Class of Space and Time Inhomogeneous Stochastic Birth-and-growth Processes.
Sommario/riassunto	Stochastic Geometry is the mathematical discipline which studies mathematical models for random geometric structures, as they appear frequently in almost all natural sciences or technical fields. Although its roots can be traced back to the 18th century (the Buffon needle problem), the modern theory of random sets was founded by D. Kendall and G. Matheron in the early 1970's. Its rapid development was influenced by applications in Spatial Statistics and by its close connections to Integral Geometry. The volume "Stochastic Geometry" contains the lectures given at the CIME summer school in Martina Franca in September 1974. The four main lecturers covered the areas of Spatial Statistics, Random Points, Integral Geometry and Random Sets, they are complemented by two additional contributions on Random Mosaics and Crystallization Processes. The book presents an up-to-date description of important parts of Stochastic Geometry.
