

1. Record Nr.	UNINA9910144603803321
Autore	Klein Christian
Titolo	Ernst Equation and Riemann Surfaces [[electronic resource]] : Analytical and Numerical Methods // by Christian Klein, Olaf Richter
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2005
ISBN	3-540-31513-6
Edizione	[1st ed. 2005.]
Descrizione fisica	1 online resource (X, 249 p.)
Collana	Lecture Notes in Physics, , 0075-8450 ; ; 685
Disciplina	530.15
Soggetti	Physics Gravitation Differential geometry Mathematical Methods in Physics Classical and Quantum Gravitation, Relativity Theory Differential Geometry
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Introduction -- The Ernst Equation -- Riemann-Hilbert Problem and Fay's Identity -- Analyticity Properties and Limiting Cases -- Boundary Value Problems and Solutions -- Hyperelliptic Theta Functions and Spectral Methods -- Physical Properties -- Open Problems -- Riemann Surfaces and Theta Functions -- Ernst Equation and Twister Theory -- Index.
Sommario/riassunto	Exact solutions to Einstein`s equations have been useful for the understanding of general relativity in many respects. They have led to physical concepts as black holes and event horizons and helped to visualize interesting features of the theory. In addition they have been used to test the quality of various approximation methods and numerical codes. The most powerful solution generation methods are due to the theory of Integrable Systems. In the case of axisymmetric stationary spacetimes the Einstein equations are equivalent to the completely integrable Ernst equation. In this volume the solutions to the Ernst equation associated to Riemann surfaces are studied in detail and physical and mathematical aspects of this class are discussed both

analytically and numerically.
