

1. Record Nr.	UNINA9910144726003321
Titolo	Development of the cerebral cortex [[e-book]]
Pubbl/distr/stampa	Chichester ; ; New York, : J. Wiley, 1995
ISBN	1-282-34792-6 9786612347924 0-470-51479-5 0-470-51481-7
Descrizione fisica	1 online resource (348 p.)
Collana	Ciba Foundation symposium ; ; 193
Altri autori (Persone)	BockGregory CardewGail
Disciplina	599.0188 612.8 612.825
Soggetti	Cerebral cortex - Growth Developmental neurobiology Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Editors: Gregory Bock and Gail Cardew. Symposium held at the Ciba Foundation, London, 29-Nov.-1 Dec. 1994.
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	DEVELOPMENT OF THE CEREBRAL CORTEX; Contents; Participants; Introduction: mysteries in the making of the cerebral cortex; Cell lineage and patterns of migration in the developing cortex; The cell lineage of neuronal subtypes in the mammalian cerebral cortex; General discussion I; The generation of cellular diversity in the cerebral cortex; Factors regulating the differentiation of neural precursors in the forebrain; Emx and Otx gene expression in the developing mouse brain; General discussion II; Guidance of thalamocortical innervation Subplate neurons and the patterning of thalamocortical connectionsThe specificity of interactions between the cortex and the thalamus; General discussion III; Molecular contributions to cerebral cortical specification; Plasticity in the development of neocortical areas; The roles of growth factors and neural activity in the development of the neocortex; General discussion IV; Factors that are critical for plasticity in the visual cortex;

Cortical development and neuropathology in schizophrenia; Pathology of cortical development and neuropsychiatric disorders; Final discussion

Index of contributors Subject index

Sommario/riassunto

This book details the rapidly advancing research on the development of the cerebral cortex. Topics covered include: new physiological data showing patterns in developing cortical organization; abnormalities of cortical development associated with psychiatric disorders; and research on cell identity and regionalization of the cortex.
