

1. Record Nr.	UNINA9910144728303321
Titolo	3D laser microfabrication [[electronic resource]] : principles and applications // edited by Hiroaki Misawa and Saulius Juodkazis
Pubbl/distr/stampa	Weinheim, : Wiley-VCH, c2006
ISBN	1-280-72338-6 9786610723386 3-527-60846-X 3-527-60840-0
Descrizione fisica	1 online resource (406 p.)
Altri autori (Persone)	MisawaHiroaki JuodkazisSaulius
Disciplina	621.366
Soggetti	Lasers - Industrial applications Microfabrication
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	3D Laser Microfabrication; Contents; List of Contributors; 1 Introduction; 2 Laser-Matter Interaction Confined Inside the Bulk of a Transparent Solid; 2.1 Introduction; 2.2 Laser-matter Interactions: Basic Processes and Governing Equations; 2.2.1 Laser Intensity Distribution in a Focal Domain; 2.2.2 Absorbed Energy Density Rate; 2.2.3 Electron-phonon (ions) Energy Exchange, Heat Conduction and Hydrodynamics: Two-temperature Approximation; 2.2.4 Temperature in the Absorption Region; 2.2.5 Absorption Mechanisms 2.2.6 Threshold for the Change in Optical and Material Properties ("Optical Damage")2.3 Nondestructive Interaction: Laser-induced Phase Transitions; 2.3.1 Electron-Phonon Energy Exchange Rate; 2.3.2 Phase Transition Criteria and Time; 2.3.3 Formation of Diffractive Structures in Different Materials; 2.3.3.1 Modifications Induced by Light in Noncrystalline Chalcogenide Glass; 2.3.3.2 Two-photon Excitation of Fluorescence; 2.3.3.3 Photopolymerization; 2.3.3.4 Photorefractive Effect; 2.4 Laser-Solid Interaction at High Intensity; 2.4.1 Limitations Imposed by the Laser Beam Self-focusing 2.4.2 Optical Breakdown: Ionization Mechanisms and Thresholds2.4.2.1

Ionization by Electron Impact (Avalanche Ionization); 2.4.2.2
Multiphoton Ionization; 2.4.3 Transient Electron and Energy Density in
a Focal Domain; 2.4.2.1 Ionization and Damage Thresholds; 2.4.3.2
Absorption Coefficient and Absorption Depth in Plasma; 2.4.3.3
Electron Temperature and Pressure in Energy Deposition Volume to the
End of the Laser Pulse; 2.4.4 Electron-to-ion Energy Transfer: Heat
Conduction and Shock Wave Formation; 2.4.4.1 Electronic Heat
Conduction; 2.4.4.2 Shock Wave Formation
2.4.5 Shock Wave Expansion and Stopping 2.4.6 Shock and Rarefaction
Waves: Formation of Void; 2.4.7 Properties of Shock-and-heat-affected
Solid after Unloading; 2.5 Multiple-pulse Interaction: Energy
Accumulation; 2.5.1 The Heat-affected Zone from the Action of Many
Consecutive Pulses; 2.5.2 Cumulative Heating and Adiabatic Expansion;
2.6 Conclusions; 3 Spherical Aberration and its Compensation for High
Numerical Aperture Objectives; 3.1 Three-dimensional Intensity Point-
spread Function in the Second Medium; 3.1.1 Refractive Indices
Mismatch-induced Spherical Aberration
3.1.2 Vectorial Point-spread Function through Dielectric Interfaces 3.1.3
Scalar Point-spread Function through Dielectric Interfaces; 3.2
Spherical Aberration Compensation by a Tube-length Change; 3.3
Effects of Refractive Indices Mismatch-induced Spherical Aberration on
3D Optical Data Storage; 3.3.1 Aberrated Point-spread Function Inside
a Bleaching Polymer; 3.3.2 Compensation for Spherical Aberration
Based on a Variable Tube Length; 3.3.3 Three-dimensional Data
Storage in a Bleaching Polymer; 3.4 Effects of Refractive Index
Mismatch Induced Spherical Aberration on the Laser Trapping Force
3.4.1 Intensity Point-spread Function in Aqueous Solution

Sommario/riassunto

A thorough introduction to 3D laser microfabrication technology, leading readers from the fundamentals and theory to its various potent applications, such as the generation of tiny objects or three-dimensional structures within the bulk of transparent materials. The book also presents new theoretical material on dielectric breakdown, allowing a better understanding of the differences between optical damage on surfaces and inside the bulk, as well as a look into the future. Chemists, physicists, materials scientists and engineers will find this a valuable source of interdisciplinary know
