Sommario/riassunto

This handbook will help veterinary clinicians and their staff to manage cases of poisoning in dogs and cats. It will also help answer enquiries about potential poisonings received from concerned pet owners. The content has been compiled from over 15 000 past cases referred to the Veterinary Poisons Information Service - a 24-hour information service for veterinary surgeons. The VPIS experience is compared and contrasted with case data and reports from the literature to provide a comprehensive overview of both toxicity and management for the agents included.
