Sommario/riassunto	The evolutions of CAD and CG in the last decade have brought closer integration between the two research communities previously entrenched in the respective disciplines of Mechanical Engineering and Computer Science. The integration has brought maturity to certain areas while new developments in other areas are instigated. CAD/CG 2005 focuses on some of these new research areas to provide participants with the necessary insights. The proceedings explores new ideas on computer aided design and computer graphics, and provides CAD and CG researchers a chance to share their latest research output and identify new research directions in this fast evolving field.
