Wolfenden -- The German myth of a victim nation : (re-)presenting Germans as victims in the new debate on their flight and explusion from Eastern Europe / Samuel Salzborn -- Implicit equations in constructions of German suffering / Bill Niven -- Dresden and Hamburg : official memory and commemoration of the victims of Allied air raids in the two Germanies / Gilad Margalit -- Regarding and imagining : contrived immediacy of the Allied bombing campaign in photography, novel, and historiography / Heinz-Peter Preusser -- Lost in translations? : the discourse of "german suffering" and W.G. Sebald's Luftkrieg und Literatur / Annette Seidel Arpaci -- Wahrheit und Erinnerung : die Spuren des Jahres 1945 in Texten von Christa Wolf / Odile Jansen -- Historicism, sentimentality, and the problem of empathy : Uwe Timm's Am Beispiel meines Bruders in the context of recent representations of German suffering / Helmut Schmitz -- Literary representations in contemporary German fiction of the expulsions of Germans from the east in 1945 / Stuart Taberner -- Der Untergang (2004) : victims, perpetrators, and the continuing fascination of fascism / Paul Cooke.

| Sommario/riassunto | The re-emergence of the issue of wartime suffering to the fore of German public discourse represents the greatest shift in German memory culture since the Historikerstreit of the 1980's. The (international) attention and debates triggered by, for example, W.G. Sebald's Luftkrieg und Literatur , Gunter Grass's Im Krebsgang , Jorg Friedrich's Der Brand testify to a change in focus away from the victims of National Socialism to the traumatic experience of the 'perpetrator collective' and its legacies. The volume brings together German, English and Israeli literary and film scholars and historians |

	Sommario/riassunto	Concurrent and Distributed Computing in Java addresses fundamental concepts in concurrent computing with Java examples. The book consists of two parts. The first part deals with techniques for programming in shared-memory based systems. The book covers concepts in Java such as threads, synchronized methods, waits, and notify to expose students to basic concepts for multi-threaded

programming. It also includes algorithms for mutual exclusion, consensus, atomic objects, and wait-free data structures. The second part of the book deals with programming in a message-passing system. This part covers resource allocation problems, logical clocks, global property detection, leader election, message ordering, agreement algorithms, checkpointing, and message logging. Primarily a textbook for upper-level undergraduates and graduate students, this thorough treatment will also be of interest to professional programmers.
