## Sommario/riassunto

Focusing exclusively on the surgical management of aortic arch disease in adults, this concise reference provides authoritative guidance on both standard and alternative approaches from internationally recognized experts. Topics include: general principles of aortic diseases imaging techniques intraoperative management neurologic protection strategies options for aortic repair surgical treatment of specific problems complications Abundant illustrations demonstrate significant imaging study findings and depict

Sommario/riassunto	This study investigates the structural changes in western Sri Lanka's agrarian society under the administration of the Dutch United East India Company (VOC). In the areas where peasant agriculture was the predominant form of production, changes in the land tenure system paved the way for a modern system of private property relations. A new class differentiation emerged and the indigenous chiefs turned into

powerful landowners. In addition to this, new light is shed on the dynamics of caste formation as a result of the early colonial encounter.
