

1. Record Nr.	UNINA9910145955303321
Autore	Azais Jean-Marc <1957->
Titolo	Level sets and extrema of random processes and fields [[electronic resource] /] / Jean-Marc Azais, Mario Wschebor
Pubbl/distr/stampa	Hoboken, N.J., : Wiley, c2009
ISBN	1-282-68723-9 9786612687235 0-470-43464-3 0-470-43463-5
Descrizione fisica	1 online resource (407 p.)
Altri autori (Persone)	WscheborMario
Disciplina	519.2/3
Soggetti	Gaussian processes Level set methods Random fields Stochastic processes
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	LEVEL SETS AND EXTREMA OF RANDOM PROCESSES AND FIELDS; CONTENTS; PREFACE; INTRODUCTION; 1 CLASSICAL RESULTS ON THE REGULARITY OF PATHS; 1.1 Kolmogorov's Extension Theorem; 1.2 Reminder on the Normal Distribution; 1.3 0-1 Law for Gaussian Processes; 1.4 Regularity of Paths; Exercises; 2 BASIC INEQUALITIES FOR GAUSSIAN PROCESSES; 2.1 Slepian Inequalities; 2.2 Ehrhard's Inequality; 2.3 Gaussian Isoperimetric Inequality; 2.4 Inequalities for the Tails of the Distribution of the Supremum; 2.5 Dudley's Inequality; Exercises; 3 CROSSINGS AND RICE FORMULAS FOR ONE-DIMENSIONAL PARAMETER PROCESSES 3.1 Rice Formulas 3.2 Variants and Examples; Exercises; 4 SOME STATISTICAL APPLICATIONS; 4.1 Elementary Bounds for $P\{M > u\}$ ; 4.2 More Detailed Computation of the First Two Moments; 4.3 Maximum of the Absolute Value; 4.4 Application to Quantitative Gene Detection; 4.5 Mixtures of Gaussian Distributions; Exercises; 5 THE RICE SERIES; 5.1 The Rice Series; 5.2 Computation of Moments; 5.3 Numerical Aspects of the Rice Series; 5.4 Processes with Continuous Paths; 6 RICE

FORMULAS FOR RANDOM FIELDS; 6.1 Random Fields from  $R(d)$  to  $R(d)$ ;  
6.2 Random Fields from  $R(d)$  to  $R(d)$ ,  $d > d$  ; Exercises  
7 REGULARITY OF THE DISTRIBUTION OF THE MAXIMUM7.1 Implicit  
Formula for the Density of the Maximum; 7.2 One-Parameter  
Processes; 7.3 Continuity of the Density of the Maximum of Random  
Fields; Exercises; 8 THE TAIL OF THE DISTRIBUTION OF THE MAXIMUM;  
8.1 One-Dimensional Parameter: Asymptotic Behavior of the  
Derivatives of  $F(M)$ ; 8.2 An Application to Unbounded Processes; 8.3 A  
General Bound for  $p(M)$ ; 8.4 Computing  $(x)$  for Stationary Isotropic  
Gaussian Fields; 8.5 Asymptotics as  $x \rightarrow \infty$ ; 8.6 Examples; Exercises; 9  
THE RECORD METHOD; 9.1 Smooth Processes with One-Dimensional  
Parameters  
9.2 Nonsmooth Gaussian Processes9.3 Two-Parameter Gaussian  
Processes; Exercises; 10 ASYMPTOTIC METHODS FOR AN INFINITE TIME  
HORIZON; 10.1 Poisson Character of High Up-Crossings; 10.2 Central  
Limit Theorem for Nonlinear Functionals; Exercises; 11 GEOMETRIC  
CHARACTERISTICS OF RANDOM SEA WAVES; 11.1 Gaussian Model for an  
Infinitely Deep Sea; 11.2 Some Geometric Characteristics of Waves;  
11.3 Level Curves, Crests, and Velocities for Space Waves; 11.4 Real  
Data; 11.5 Generalizations of the Gaussian Model; Exercises; 12  
SYSTEMS OF RANDOM EQUATIONS; 12.1 The Shub-Smale Model  
12.2 More General Models12.3 Noncentered Systems (Smoothed  
Analysis); 12.4 Systems Having a Law Invariant Under Orthogonal  
Transformations and Translations; 13 RANDOM FIELDS AND  
CONDITION NUMBERS OF RANDOM MATRICES; 13.1 Condition Numbers  
of Non-Gaussian Matrices; 13.2 Condition Numbers of Centered  
Gaussian Matrices; 13.3 Noncentered Gaussian Matrices; REFERENCES  
AND SUGGESTED READING; NOTATION; INDEX

---

Sommario/riassunto

A timely and comprehensive treatment of random field theory with  
applications across diverse areas of study Level Sets and Extrema of  
Random Processes and Fields discusses how to understand the  
properties of the level sets of paths as well as how to compute the  
probability distribution of its extremal values, which are two general  
classes of problems that arise in the study of random processes and  
fields and in related applications. This book provides a unified and  
accessible approach to these two topics and their relationship to  
classical theory and Gaussian processes and fields, and the mo
