Record Nr. UNINA9910580205503321 Autore Agustí-Brisach Carlos Titolo Decline of Mediterranean Fruit Crops and Forests Associated with Fungal Trunk Pathogens Basel, : MDPI - Multidisciplinary Digital Publishing Institute, 2022 Pubbl/distr/stampa Descrizione fisica 1 online resource (204 p.) Soggetti Biology, life sciences Research & information: general Technology, engineering, agriculture Lingua di pubblicazione Inglese **Formato** Materiale a stampa Livello bibliografico Monografia Sommario/riassunto This book was established after closing the Special Issue "Decline of Mediterranean Fruit Crops and Forests Associated with Fungal Trunk Pathogens" edited by Dr. Carlos Agusti-Brisach as Guest Editor and Mr. Everett Zhu as Manager Editor. This book represents a collection of papers related to the etiology, epidemiology, and control of fungal trunk diseases in several Mediterranean woody crops such as almond, citrus, grapevine or pistachio, among others. This volume was intended to generate knowledge on the etiology and epidemiology of tree decline syndromes to build a strong foundation for developing effective management approaches to reduce the yield losses caused by these diseases. In addition, a broad collection of techniques to conduct studies on etiology and epidemiology as well as to determine the effect

of biotic and abiotic factors enhancing the progression of trunk

diseases in woody crops are shown in this book.
