

1. Record Nr.	UNINA9910146064203321
Titolo	Vector targeting for therapeutic gene delivery
Pubbl/distr/stampa	[Place of publication not identified], : Wiley Liss, 2002
ISBN	1-280-55647-1 9786610556472 0-471-46116-4 0-471-23430-3
Descrizione fisica	1 online resource (716 pages)
Disciplina	616.042
Soggetti	Genetic Therapy - methods Genetic Vectors Gene Expression Regulation, Viral - genetics Transduction, Genetic - methods Pathology Medicine Health & Biological Sciences Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Sommario/riassunto	"...very informative and comprehensive...belongs on the shelf of every library and lab providing essential resources for research on vector design or delivery." - Cancer Biology and Therapy. This comprehensive volume presents the most recent advances in target definition technology and provides a detailed overview on the rational design of targeted vectors for gene therapy. A theoretical framework for advanced vector design is provided that integrates all of the allied sciences relevant to the study of vector targeting. The text discusses the basic underlying science and then leads to discussions of the various viral vectors and methods of defining targets. Finally, an expert outlook on promising therapeutic applications is offered.

Nota di contenuto	Chapter 1. Introduction: Setting the Scene -- Chapter 2. The global clash of civilizations on homosexuality and the threat of hate crimes against LGBTQ+ communities as documented by international organizations and NGOs -- Chapter 3. Using World Vaues Survey and European Social Survey data on homosexuality and homonegativity: the comparative evidence from the social sciences -- Chapter 4. Methodology and Data for our new analysis -- Chapter 5. Results from the bivariate and multivariate analysis of homonegativity -- Chapter 6. The potential for violence against homosexuals and strategies of advancing tolerant gender social norms and democracy.-Chapter 7. Perspectives and conclusions from this study.
Sommario/riassunto	This open access book describes the world's increasingly multicultural societies face the problem that more and more diverse lifestyles

(LGBTQIA+ communities) are not universally accepted, and that today, in addition to xenophobia, racism and anti-Semitism, there is substantial homonegativity. This book explores this issue, reviews the empirical literature on the subject and provides new empirically based evidence on a global and European scale. Based on an analysis of The World Values Survey using the statistical software SPSS, it provides a scientifically sound answer to the question of which social groups in Europe and around the globe are more homophobic and which are less, together with insights into the multivariate relationships between homonegativity and religiously motivated political extremism. The extensive and representative statistical samples allow cautious conclusions to be drawn for smaller religious groups in the European Union and other countries around the world.
