

1. Record Nr.	UNINA9910146064303321
Autore	Pattavina Achille
Titolo	Switching Theory, Architectures and Performance in Broadband ATM Networks: Architectures and Performance in Broadband ATM Networks
Pubbl/distr/stampa	[Place of publication not identified], : John Wiley & Sons Incorporated, 1998
ISBN	1-280-55527-0 9786610555277 0-470-85251-8 0-470-84191-5
Descrizione fisica	1 online resource (423 pages)
Disciplina	621.3815372
Soggetti	Asynchronous transfer mode Broadband communication systems Communication technology Computer network architectures Switching theory
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	Preface -- Chapter 1 Broadband Integrated Services Digital Network -- 1.1. Current Networking Scenario -- 1.1.1. Communication services -- 1.1.2. Networking issues -- 1.2. The Path to Broadband Networking -- 1.2.1. Network evolution through ISDN to B-ISDN -- 1.2.2. The protocol reference model -- 1.3. Transfer Mode and Control of the B-ISDN -- 1.3.1. Asynchronous time division multiplexing -- 1.3.2. Congestion control issues -- 1.4. Synchronous Digital Transmission -- 1.4.1. SDH basic features -- 1.4.2. SDH multiplexing structure -- 1.4.3. Synchronization by pointers -- 1.4.4. Mapping of SDH elements -- 1.5. The ATM Standard -- 1.5.1. Protocol reference model -- 1.5.2. The physical layer -- 1.5.3. The ATM layer -- 1.5.4. The ATM adaptation layer -- 1.5.4.1. AAL Type 1 -- 1.5.4.2. AAL Type 2 -- 1.5.4.3. AAL Type 3/4 -- 1.5.4.4. AAL Type 5 -- 1.5.4.5. AAL payload capacity -- 1.6. References -- 1.7. Problems -- Chapter 2 Interconnection Networks -- 2.1. Basic Network Concepts -- 2.1.1.

Equivalence between networks -- 2.1.2. Crossbar network based on splitters and combiners -- 2.2. Full-connection Multistage Networks -- 2.3. Partial-connection Multistage Networks -- 2.3.1. Banyan networks -- 2.3.1.1. Banyan network topologies -- 2.3.1.2. Banyan network properties -- 2.3.2. Sorting networks -- 2.3.2.1. Merging networks -- 2.3.2.2. Sorting networks -- 2.4. Proof of Merging Schemes -- 2.4.1. Odd-even merge sorting -- 2.4.2. Bitonic merge sorting -- 2.5. References -- 2.6. Problems -- Chapter 3 Rearrangeable Networks -- 3.1. Full-connection Multistage Networks -- 3.2. Partial-connection Multistage Networks -- 3.2.1. Partially self-routing PC networks -- 3.2.1.1. Horizontal extension -- 3.2.1.2. Vertical replication -- 3.2.1.3. Vertical replication with horizontal extension -- 3.2.1.4. Bounds on PC rearrangeable networks -- 3.2.2. Fully self-routing PC networks -- 3.2.3. Fully self-routing PC networks with output multiplexing -- 3.3. Bounds on the Network Cost Function -- 3.4. References -- 3.5. Problems -- Chapter 4 Non-blocking Networks -- 4.1. Full-connection Multistage Networks -- 4.1.1. Two-stage network -- 4.1.2. Three-stage network -- 4.1.3. Recursive network construction -- 4.2. Partial-connection Multistage Networks -- 4.2.1. Vertical replication -- 4.2.2. Vertical replication with horizontal extension -- 4.2.3. Link dilation -- 4.2.4. EGS networks -- 4.3. Comparison of Non-blocking Networks -- 4.4. Bounds on the Network Cost Function -- 4.5. References -- 4.6. Problems -- Chapter 5 The ATM Switch Model -- 5.1. The Switch Model -- 5.2. ATM Switch Taxonomy -- 5.3. References -- Chapter 6 ATM Switching with Minimum-Depth Blocking Networks -- 6.1. Unbuffered Networks -- 6.1.1. Crossbar and basic banyan networks -- 6.1.1.1. Basic structures -- 6.1.1.2. Performance -- 6.1.2. Enhanced banyan networks -- 6.1.2.1. Structures -- 6.1.2.2. Performance -- 6.2. Networks with a Single Plane and Internal Queueing -- 6.2.1. Input queueing -- 6.2.2. Output queueing -- 6.2.3. Shared queueing -- 6.2.4. Performance -- 6.3. Networks with Unbuffered Parallel Switching Planes -- 6.3.1. Basic architectures -- 6.3.2. Architectures with output queueing -- 6.3.2.1. Specific architectures -- 6.3.2.2. Performance -- 6.3.3. Architectures with combined input-output queueing -- 6.3.3.1. Models for performance analysis -- 6.3.3.2. Performance results -- 6.4. Additional Remarks -- 6.5. References -- 6.6. Problems -- Chapter 7 ATM Switching with Non-Blocking Single-Queueing Networks -- 7.1. Input Queueing -- 7.1.1. Basic architectures -- 7.1.1.1. The Three-Phase switch -- 7.1.1.2. The Ring-Reservation switch -- 7.1.2. Performance analysis -- 7.1.2.1. Asymptotic throughput -- 7.1.2.2. Packet delay -- 7.1.2.3. Packet loss probability -- 7.1.3. Enhanced architectures -- 7.1.3.1. Architecture with channel grouping -- 7.1.3.2. Architecture with windowing -- 7.2. Output Queueing -- 7.2.1. Basic architectures -- 7.2.2. Performance analysis -- 7.3. Shared Queueing -- 7.3.1. Basic architectures -- 7.3.2. Performance analysis -- 7.4. Performance Comparison of Different Queueings -- 7.5. Additional Remarks -- 7.6. References -- 7.7. Problems -- Chapter 8 ATM Switching with Non-Blocking Multiple-Queueing Networks -- 8.1. Combined Input-Output Queueing -- 8.1.1. Basic architectures -- 8.1.1.1. Internal queue loss -- 8.1.1.2. Internal backpressure -- 8.1.2. Performance analysis -- 8.1.2.1. Constrained output queue capacity -- 8.1.2.2. Arbitrary input and output queue capacities -- 8.1.3. Architectures with parallel switching planes -- 8.2. Combined Shared-Output Queueing -- 8.2.1. Basic architecture -- 8.2.2. Performance analysis -- 8.3. Combined Input-Shared Queueing -- 8.3.1. Basic architectures -- 8.3.2. Performance analysis -- 8.4. Comparison of Switch Capacities in Non-blocking Switches -- 8.5. Additional Remarks -- 8.6. References -- 8.7. Problems -- Chapter 9 ATM Switching with

Arbitrary-Depth Blocking Networks -- 9.1. Switch Architectures Based on Deflection Routing -- 9.1.1. The Shuffleout switch -- 9.1.2. The Shuffle Self-Routing switch -- 9.1.3. The Rerouting switch -- 9.1.4. The Dual Shuffle switch -- 9.2. Switch Architectures Based on Simpler SEs -- 9.2.1. Previous Architectures with SEs -- 9.2.2. The Tandem Banyan switch -- 9.3. Architecture Enhancements -- 9.3.1. Extended routing -- 9.3.2. Interstage bridging -- 9.4. Performance Evaluation and Comparison -- 9.4.1. The Shuffleout switch -- 9.4.1.1. Network with 2 X 4 SEs -- 9.4.1.2. Network with 2 X 2 SEs -- 9.4.1.3. Network performance -- 9.4.2. The Shuffle Self-Routing switch -- 9.4.2.1. Basic network with 2 X 4 SEs -- 9.4.2.2. Basic network with 2 X 2 SEs -- 9.4.2.3. Basic network performance -- 9.4.2.4. Network with extended routing and 2 X 4 SEs -- 9.4.2.5. Network with extended routing and 2 X 2 SEs -- 9.4.2.6. Network performance with extended routing -- 9.4.3. The Rerouting switch -- 9.4.4. The Dual Shuffle switch -- 9.4.5. The Tandem Banyan switch -- 9.4.6. Interconnection network performance comparison -- 9.4.7. Overall switch performance -- 9.5. Switch Architectures with Parallel Switching Planes -- 9.6. Additional Remarks -- 9.7. References -- 9.8. Problems -- Appendix Synchronous Queues -- A.1 Synchronous Single-server Queues -- A.1.1. The M/D/1 queue -- A.1.1.1. The asynchronous M/G/1 queue -- A.1.1.2. The asynchronous M/D/1 queue -- A.1.1.3. The synchronous M/D/1 queue -- A.1.2. The Geom (N)/D/1 queue -- A.1.3. The Geom/G/1 queue -- A.1.4. The Geom/G/1/B queue -- A.2. Synchronous Multiple-server Queues -- A.2.1. The M/D/C queue -- A.2.2. The Geom(N)/D/C/B queue -- A.3. References -- Index.

Sommario/riassunto

Reflecting the developments in the integrated transport of heterogenous kinds of communication services, this book provides an account of the switching for broadband ATM networks by covering three different areas: the theory of switching; the architecture of ATM switching fabrics; and the performance of the ATM switching fabrics.; The book combines the analysis of ATM theory, architecture and performance and presents the analytical models available to evaluate the traffic performance of ATM switches under random traffic, together with a wide set of results on the traffic performance of each single ATM switch architecture.
