

1. Record Nr.	UNINA9910146075103321
Autore	Bingham John A. C
Titolo	ADSL, VDSL, and multicarrier modulation
Pubbl/distr/stampa	[Place of publication not identified], : Wiley, 2000
ISBN	1-280-55621-8 9786610556212 0-470-31014-6 0-471-20072-7
Edizione	[Reissue]
Descrizione fisica	1 online resource (301 pages)
Collana	Wiley series in telecommunications and signal processing ADSL, VDSL, and multicarrier modulation
Disciplina	621.385
Soggetti	Asymmetric digital subscriber lines Very high-speed digital subscriber lines Modulation (Electronics) Computer networks Electrical & Computer Engineering Engineering & Applied Sciences Telecommunications
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Sommario/riassunto	The state of the art of multicarrier modulation for the transmission of high-speed data With DSL technology poised to provide the fastest means of Internet access for years to come, there is a growing need for practical information on running xDSL services over existing telephone lines. Communications expert John Bingham draws on three decades of intimate involvement with data transmission research to provide a complete guide to the state of the art and future direction of multicarrier modulation (MCM) - one of the key methods for high-speed data transmission today. Geared to designers and system planners working with DSL modems, Internet access, and telephony, ADSL, VDSL, and Multicarrier Modulation presents everything engineers and programmers need to design MCM modems, understand current

implementations, and formulate strategies for future improvements and research.
