

1. Record Nr.	UNINA9910146272103321
Autore	Ruzicka Michael
Titolo	Electrorheological Fluids: Modeling and Mathematical Theory / / by Michael Ruzicka
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer, , 2000
ISBN	3-540-44427-0
Edizione	[1st ed. 2000.]
Descrizione fisica	1 online resource (XIV, 178 p.)
Collana	Lecture Notes in Mathematics, , 1617-9692 ; ; 1748
Classificazione	76W05 76A02 76D03
Disciplina	532.051015118
Soggetti	Fluid mechanics Continuum mechanics Differential equations Engineering Fluid Dynamics Continuum Mechanics Differential Equations
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (pages 165-173) and index.
Sommario/riassunto	This is the first book to present a model, based on rational mechanics of electrorheological fluids, that takes into account the complex interactions between the electromagnetic fields and the moving liquid. Several constitutive relations for the Cauchy stress tensor are discussed. The main part of the book is devoted to a mathematical investigation of a model possessing shear-dependent viscosities, proving the existence and uniqueness of weak and strong solutions for the steady and the unsteady case. The PDS systems investigated possess so-called non-standard growth conditions. Existence results for elliptic systems with non-standard growth conditions and with a nontrivial nonlinear r.h.s. and the first ever results for parabolic systems with a non-standard growth conditions are given for the first time. Written for advanced graduate students, as well as for researchers in the field, the discussion of both the modeling and the mathematics

is self-contained.
