The Second Tshwane Declaration, 2012.
Sommario/riassunto	This book looks at the first ten years of the African Union. This is the second in a series of books that will be produced each year from annual conferences held on the multi-faceted issue of African liberation. The key themes of the book explore ways of improving the effectiveness of the African Union, fostering unity amongst African countries through

entrenchment of pan-Africanism, and building ownership of the African Union by the African people and their communities. In addition, the thoughts of key figures of pan-Africanism and black emancipation, such as Sylvester Williams and Franz Fanon, are re-positioned to even greater contemporary relevance. Through its promotion of Ethiopianism, pan-Africanism and the African renaissance, we trust that this book will add new interest and a fresh perspective to how Africans move forward together into a post-colonial era where policies and actions are determined by the united agency of liberated Africans the world over.

Nota di contenuto	Some group theory -- Groups acting on sets -- Transitivity -- Primitivity -- Suborbits and orbitals -- More about symmetric groups -- Linear groups -- Wreath products -- Rational numbers -- Jordan groups -- Examples of Jordan groups -- Relations related to betweenness -- Classification theorems -- Homogeneous structures -- The Hrushovski construction -- Applications and open questions.
Sommario/riassunto	The book, based on a course of lectures by the authors at the Indian Institute of Technology, Guwahati, covers aspects of infinite permutation groups theory and some related model-theoretic constructions. There is basic background in both group theory and the

necessary model theory, and the following topics are covered: transitivity and primitivity; symmetric groups and general linear groups; wreath products; automorphism groups of various treelike objects; model-theoretic constructions for building structures with rich automorphism groups, the structure and classification of infinite primitive Jordan groups (surveyed); applications and open problems. With many examples and exercises, the book is intended primarily for a beginning graduate student in group theory.

Sommario/riassunto	Broadcasting has an important role to play in development--as a widespread tool of information transfer, as a method to improve governance, as an important economic sector in its own right, and as a

potential access to point to new information and communications technology. Sector reform is long over-due, with the state dominating radio broadcasting in three-quarters of the world. Reform can have a significant impact on governance and transparency. It is time for the World Bank to turn its attention to broadcasting, where many lessons of reform apply, and where the unmet need for assistance is great. Potential activities include basic reform of sector ownership, convergence regulation to harmonize regulations covering broadcast and telecommunication infrastructure, support for community radio stations to improve access for the poor, and pilot projects in digital television to assess the potential to widen access to the internet.
