1. Record Nr.   UNINA9910146312103321

   Autore   Coates John H.

   Titolo   Arithmetic Theory of Elliptic Curves : Lectures given at the 3rd Session
                        of the Centro Internazionale Matematico Estivo (C.I.M.E.)held in Cetaro,
                        Italy, July 12-19, 1997 / / by J. Coates, R. Greenberg, K.A. Ribet, K.
                        Rubin ; edited by C. Viola

   Pubbl/distr/stampa   Berlin, Heidelberg : , : Springer Berlin Heidelberg : , : Imprint : Springer,
                        , 1999

   ISBN   3-540-48160-5

   Edizione   [1st ed. 1999.]

   Descrizione fisica   1 online resource (VIII, 264 p.)

   Collana   C.I.M.E. Foundation Subseries, , 2946-1820 ; ; 1716

   Disciplina   510

   Soggetti   Number theory
                        Geometry, Algebraic
                        Number Theory
                        Algebraic Geometry

   Lingua di pubblicazione   Inglese

   Formato   Materiale a stampa

   Livello bibliografico Monografia

   Note generali   Bibliographic Level Mode of Issuance: Monograph

   Nota di contenuto   Fragments of the GL2 Iwasawa theory of elliptic curves without complex
                        multiplication -- Iwasawa theory for elliptic curves -- Torsion points on
                        J 0(N) and Galois representations -- Elliptic curves with complex
                        multiplication and the conjecture of Birch and Swinnerton-Dyer.

   Sommario/riassunto   This volume contains the expanded versions of the lectures given by
                        the authors at the C.I.M.E. instructional conference held in Cetraro,
                        Italy, from July 12 to 19, 1997. The papers collected here are broad
                        surveys of the current research in the arithmetic of elliptic curves, and
                        also contain several new results which cannot be found elsewhere in
                        the literature. Owing to clarity and elegance of exposition, and to the
                        background material explicitly included in the text or quoted in the
                        references, the volume is well suited to research students as well as to
                        senior mathematicians.
