History and Propaganda -- 4. Literary Tradition -- 5. The Civil War and Cowley's Later Writings -- 6. The Text -- The Civil War -- The Civill Warre -- The second Booke -- The third Booke -- Notes -- Appendixes and Index -- Index
Sommario/riassunto	The Civil War is a poem which Abraham Cowley (1618-67) did not complete, for political and historical reasons, and of which only the first volume was published; the other two volumes have been considered irrecoverably lost since Cowley's death. Professor Pritchard recently found two copies of the complete poem in a collection of family papers at the Hertfordshire County Record Office and here presents a corrected edition of the first and previously published book, and the text of the hitherto unpublished books two and three. The poem is a major addition to the body of Cowley's poetry; it has close and sometimes surprising connections with much of his other work. It is not only the most extended and important of his political poems but a significant addition to the genre of the political poem. It is also unique as the attempt by a poet of stature to give epic treatment to the events of the English Civil War. Professor Pritchard provides a discussion of the personal, historical, and literary contexts of the poem in the

introduction, as well as of textual problems and methods, showing the way in which the poem is shaped both by contemporary history and polemics and by classical and later literary tradition.

2. Record Nr.	UNINA9910785765703321
Titolo	Facing the reality of drug-resistant tuberculosis [[electronic resource]] : challenges and potential solutions in India : summary of a joint workshop // by the Institute of Medicine, the Indian National Science Academy, and the Indian Council of Medical Research ; Steve Olson ... [et al.], rapporteurs ; Forum on Drug Discovery, Development, and Translation, Board on Health Sciences Policy, Institute of Medicine of the National Academies

Sommario/riassunto

"An estimated 8.8 million people fell ill with tuberculosis (TB) in 2010 and 1.4 million died from the disease. Although antibiotics to treat TB were developed in the 1950s and are effective against a majority of TB cases, resistance to these antibiotics has emerged over the years, resulting in the growing spread of multidrug-resistant (MDR) TB. Due to challenges in timely and accurate diagnosis of drug-resistant TB, length and tolerability of treatment regimens, and expense of second-line anti-TB drugs, effectively controlling the disease requires complex public health interventions. The IOM Forum on Drug Discovery, Development, and Translation held three international workshops to gather information from local experts around the world on the threat of drug resistant TB and how the challenges it presents can be met. Workshops were held in South Africa and Russia in 2010. The third workshop was held April 18-19, 2011, in New Delhi, India, in collaboration with the Indian National Science Academy and the Indian Council of Medical Research. The aim of the workshop was to highlight key challenges to controlling the spread of drug-resistant strains of TB in India and to discuss strategies for advancing and integrating local and international efforts to prevent and treat drug-resistant TB. This document summarizes the workshop."--Publisher's description.
