Sommario/riassunto	The significance that people grant to their affiliations as members of nations, religions, classes, races, ethnicities and genders is evidence of

the vital need for a cosmopolitan project that originates in the figure of Anyone - the universal and yet individual human being. Cosmopolitanism offers an alternative to multiculturalism, a different vision of identity, belonging, solidarity and justice, that avoids the seemingly intractable character of identity politics: it identifies samenesses of the human condition that underlie the surface differences of history, culture and society, nation, e

Sommario/riassunto	This book provides a comprehensive overview of the current progress in muscle contraction and cell motility research. It discusses structural, mechanical, and biochemical characteristics of skeletal, cardiac, and smooth muscles, and cell motility. The experimental objects of the studies described in this volume extend from humans to molecules. A distinct feature of this volume is that, in some chapters, evidence against the textbook view is presented, showing how well-established

dogma can be denied by an unexpected discovery. This book is as interesting as it is informative for general readers and young scientists alike, and it is sure to inspire both to challenge the enticing mysteries that still remain in this exciting research field.
